

BambooDefi White Paper v.3.0.3

A NexxyoLabs development

| *Published December, 2020* |

1 Disclaimer.

This BambooDefi Whitepaper is for information purposes only. BambooDefi does not guarantee the accuracy or conclusions reached in this Whitepaper, and this Whitepaper is provided "as is". BambooDefi makes no warranties, express, implied, statutory or otherwise, whatsoever, including but not limited to:

- ❑ (i) warranties of merchantability, fitness for a particular purpose, suitability, use, title or non-infringement.
- ❑ (ii) that the content of this Whitepaper is error-free.
- ❑ (iii) that such content will not infringe the rights of any third party.

BambooDefi has no liability for damages of any kind arising from the use, reference or reliance on this Whitepaper or any of its contents, even if advised of the possibility of such damages. In no event shall BambooDefi be liable to any person or entity for any damages, losses, liabilities, costs or expenses of any kind, whether direct or indirect, consequential, compensatory, incidental, actual, exemplary, punitive or special for use, reference or reliance on this Whitepaper or any of the contents herein, including, without limitation, any loss of business, income, profits, data, use, goodwill or other intangible losses.

Important notice

This Whitepaper is not endorsed by any government authority. This document is not a prospectus nor has it been reviewed by the CNMV or any other administrative authority.

It is essential that those who decide to purchase or invest in such or similar assets consider all associated risks and evaluate whether they have sufficient information to understand what is being offered.

It is only available on the website <https://www.bamboodefif.com> and may not be redistributed, reproduced or sent to any other person or published, in part or in full, for any purpose, without the prior written consent of BambooDefi.

This Whitepaper, or any part of it, must not be taken or transmitted to any country or territory where its distribution or dissemination is prohibited or restricted. Private

persons or legal entities that come into possession of this Whitepaper must inform themselves and observe the relevant legal or regulatory restrictions to which they may be subject and seek all necessary professional advice.

The investments described in this document may be very high risk, and may even result in the loss of the entire investment. The activity for which the funds raised will be used is new and does not correspond to any proven business model. The tokens that can be acquired will not be held by entities legally authorized to provide investment services and the registration technology that is expected to be used (blockchain) is also new and may involve significant risks.

2 Risk Factors

The purchase of cryptomoney is associated with extreme level of risk. The potential buyer should carefully study the information about these risks. Any real risk can have a significant negative impact on the BambooDefi platform and the price of BAMBOO tokens.

Cryptomoney holders may face a number of risks and uncertainties that they contain, but these are not limited to those mentioned below. Uncertainty and risks that are not listed, can have a significant impact on the entire BambooDefi ecosystem and the price of BAMBOO tokens.

The investments described in this document can be very risky, even losing the entire investment. The activity to which the funds raised will be allocated is new and does not correspond to any proven business model. The "Tokens" that can be acquired will not be held by entities legally authorized to provide investment services and the registration technology that is expected to be used (blockchain) is also new and may involve significant risks.

This document is not a prospectus nor has it been reviewed by the CNMV or any other administrative authority. It is essential that those who decide to buy or invest in such or similar assets consider all associated risks and evaluate whether they have sufficient information to understand what is being offered.

Risks related to cryptography and BAMBOO tokens.

Market Stagnation.

Because the public trading of BAMBOO tokens has not yet started, their sale may not be activated and the market may not be liquid. This could increase the volatility of token prices.

Despite the existence of operational elements that facilitate the sale of BAMBOO tokens and their exchange for other crypto-currencies, an efficient and effective public market for BAMBOO tokens may stagnate. Furthermore, if the liquidity of the market has stagnated, its price may show a high volatility, as well as BAMBOO token holders may experience liquidity problems at some point.

Increase or decrease in cryptomoney prices as a result of speculative trading risks.

The evaluation of cryptography in the collateral or secondary market is often non-transparent and highly speculative. BAMBOO tokens do not provide their owner with any ownership rights over the company's assets. BAMBOO tokens do not provide any material value.

The price of BAMBOO can be very volatile in a short period of time. There is an extreme risk that the BAMBOO token holder may lose the funds paid for the BAMBOO tokens. The worst case scenario is when their value drops to zero.

BAMBOO Token can have a zero market price

There are no predictions or guarantees regarding the liquidity movement of BAMBOO tokens. BambooDefi is not responsible for the future market value of the BAMBOO tokens, their liquidity, the transfer speed and the possibility to enter several markets.

BAMBOO Token cannot be refunded

In addition to the cases provided by the applicable law or legally binding documentation, BambooDefi is not responsible for the redemption of the BAMBOO tokens and the return of the funds to their owners.

There is no guarantee, and there will not be in the future, that the BAMBOO token is valuable and useful. The future value of the BAMBOO token cannot be promised.

The return of the funds paid for the BAMBOO tokens may not be feasible in cases where a different version of the laws and regulations than the one acceptable on the BambooDefi platform is appealed.

Saving BAMBOO tokens.

The custody of crypto-currencies or tokens that are issued is not carried out by an entity authorized to provide investment services.

IEOs, as well as the custody of crypto-currencies or tokens, are based on what is known as distributed general ledger or block chain technology, a new technology that is not risk-free, as described below.

Risks associated with technology and Blockchain

Technical risks

The investment through BambooDefi aims to finance a CAD platform that is still in the testing phase and can be modified.

Investors are warned that the functionalities of the future BambooDefi platform described in this Whitepaper are subject to change due to technical limitations.

Risk of government intervention

BambooDefi works in a new field of activity, which can be controlled and supervised to a great extent by various agencies, including increased attention from surveillance and research agencies. There is no guarantee that regulators will not conduct a detailed analysis of BambooDefi activity.

Nor is there any guarantee that legal action will not be taken against BambooDefi. These actions may include various sanctions, fines, disapprovals, warnings and other punitive measures against BambooDefi. Such retaliation may require BambooDefi to reorganize its operations or reduce its offering of specific products and services. This may affect BambooDefi's reputation and lead to increased operating costs, which will negatively affect BAMBOO tokens and the BambooDefi ecosystem.

Legal Risks

The legal status of cryptography, tokens, block-chain technology and digital assets in many jurisdictions is not defined or clarified.

It is difficult to predict which public authorities will regulate these technologies. It is difficult to predict the likely changes and modifications to the laws that regulate this in general, and also the applications with block chain technology, cryptographic tokens and digital assets. These changes may have a negative effect on BAMBOO tokens. BAMBOO tokens can be considered as financial instruments that require registration. BambooDefi can stop the distribution of BAMBOO tokens, transactions in specific areas of jurisdiction, platform development and regional operations if those activities are considered illegal and economically unviable for those reasons.

Currently there is no specific legislation in Spain or in the European Union that specifically regulates this:

- ★ (i) the processes for the initial issue of the Cryptomoney or the IEO or,
- ★ (ii) the legal nature of the rights arising from the subscription, ownership or possession of cryptosystems or tokens.

In this regard, we refer to the recommendation of the "Banco de España" of February 8, 2018¹ on the "Unregulated Area "² which establishes that if a person buys or has "crypto-currencies" they do not benefit from the guarantees and safeguards associated with regulated financial products. This report also refers to the risks that we indicate and that may extend to this issue:

- ★ - Problems arising from the cross-border nature of the phenomenon,
- ★ - High risk of loss of invested capital,
- ★ - Liquidity problems and
- ★ - Extreme volatility and inadequate information.

The tokens (as defined below) are classified as "Security Tokens", i.e., "negotiable securities" for the purposes of the provisions of Royal Legislative Decree 4/2015, of 23

¹ <http://www.cnmv.es/Portal/verDoc.axd?t=%7bf3ab3acc-c4fc-4b99-b61f-b9ef8dab7a98%7d>

² "Crypto-currencies", as well as the different actors involved in their direct marketing, are not regulated in the European Union. This means that if a person buys or has "crypto-currencies" they do not benefit from the guarantees and safeguards associated with regulated financial products. Also, either because of the way they are structured or the place of residence of their issuers, "tokens" issued in a UCI or financial products referred to "crypto-currencies" may not be subject to regulation. Therefore, buyers or investors would lack the protections offered by Spanish legislation and, in general, the European Union to regulated investments, being especially vulnerable to fraud, price manipulation or other illegal activities. For example, in some countries there have been scams and pyramid schemes related to the placement of UCIs in which the funds collected were used for purposes other than those announced. There have also been cases of the use of "crypto-currency" for money laundering purposes.

October, approving the revised text of the Securities Market Law (hereinafter the "Securities Market Law"). Notwithstanding the foregoing, investors are warned that token holders will not hold any of the rights normally associated with the holding of shares representing the capital stock of corporations (such as, but not limited to, voting or dividend rights), with respect to the issuer of BAMBOO's DeFi described in this Whitepaper, i.e., Nexxyo Labs.

Token holders will have the right to use them for the BambooDeFi ecosystem. In this sense, furthermore, the CNMV report of September 20, 2018³ where it says: "The tokens" that give the right to access services or receive goods or products, which are offered referring, explicitly or implicitly, to the expectation of obtaining by the buyer or investor a benefit as a result of its revaluation or any remuneration associated with the instrument or mentioning its liquidity or the possibility of trading in markets equivalent or supposedly similar to the stock markets subject to regulation". However, it is considered appropriate to exclude from consideration as negotiable those cases in which it is not reasonably possible to establish a correlation between the expectations of revaluation or profitability of the instrument and the evolution of the underlying business or project.

Inability to maintain and receive licenses or permits

Since the date of the sale of BAMBOO tokens, there are no rules that oblige the company to receive the necessary permits and licenses for this type of activity. There is a risk that such requirements will be introduced in the future and affect BambooDeFi.

In this case, the commitment of BambooDeFi will be based on the urgency of these licenses and permits and the fulfillment of the relevant conditions on behalf of BambooDeFi. The conditions for the reception and renewal of the licenses, as well as the control of the compliance with these licenses by the regulatory authorities may vary.

These bodies may require BambooDeFi to comply with the following conditions: conditions of employment of qualified personnel; multiple standards; conditions of maintenance of a certain technical level; consent to give permission to monitor our operations; quality control system standards; requests related to the level of service; provision of relevant information at the request of the licensing bodies. Compliance with these requirements may result in financial contributions and considerable time, as well as delays in the operation of the BambooDeFi system. In addition, public and private persons have the right to comment on BambooDeFi and to participate in the licensing process in other ways, including appeals to the courts and political pressure.

³ <http://cnmv.es/DocPortal/Fintech/CriteriosICOs.pdf>

In addition, these licenses may limit the ability of BambooDefi to carry out its work on a commercial basis or to carry out its activities.

Risk of onerous contract due to compliance with regulations, norms and standards

BambooDefi may not comply with applicable laws and regulations. It may also not recognize the results of relevant audits conducted by regulatory agencies. Another scenario is an increase in government regulation of BambooDefi operations. All of these issues can lead to significant additional costs, simply complicating the work or leading to numerous sanctions. The result is a negative impact on BambooDefi's business.

BambooDefi activities and products are guided by various government agencies and authorities to comply with applicable rules and regulations. These regulators have considerable freedom and power in matters of law and their explanation. State agencies have the right to conduct periodic inspections to monitor the property and activities of BambooDefi. Any such audit may conclude that BambooDefi violates certain regulations, standards or laws. BambooDefi may fail to correct violations or be unable to appeal such decisions.

Any errors made by BambooDefi in the area of compliance with applicable regulations, laws or monitoring results may result in more drastic penalties, fines or injunctions and sanctions. They may include the need to stop certain activities; they may even contain criminal and administrative charges against the relevant persons.

Such decisions, penalties, demands and stricter control of government regulations can increase the costs of BambooDefi and have a very detrimental impact on your platform and your business in general.

Risk related to the BambooDeFi Business Plan

The BambooDeFi Business Plan is only based on the expectations about the evolution of the DeFi in the crypto-currency market. This WhitePaper does not provide a quantified Business Plan, neither in turnover nor in calendar, beyond those market expectations. There is a very high risk associated with these expectations not being met, which can mean the total loss of any amount invested in this project. In the event that the expectations are met, the lack of a Business Plan does not allow to estimate in which percentage BambooDeFi would benefit from these expectations".

Other risks

This Whitepaper has not been verified or registered in the official records of the National Securities Market Commission ("CNMV"). The IEO described in this Whitepaper is exempt from the obligation to publish a prospectus under the provisions of Article 35(b) of the Securities Market Law⁴, that is:

- ★ - a) An offer of securities addressed to less than 150 natural or legal persons by a Member State, not including qualified investors and
- ★ - b) An offer of securities for a total amount in the European Union of less than 5,000,000 euros, which will be calculated over a period of 12 months.

The BambooDefi platform has not been rated by any credit rating agency.

⁴ Article 35. Public offer of sale or subscription of securities. A public offer of sale or subscription of securities is any communication to persons, in any form or by any means, that presents sufficient information on the terms of the offer and the securities being offered, so as to enable an investor to decide to purchase or subscribe for those securities. The obligation to publish a prospectus shall not apply to any of the following types of offerings, which, consequently, for the purposes of this law, shall not be regarded as public offerings: a) An offer of securities addressed exclusively to qualified investors. b) An offer of securities addressed to fewer than 150 natural or legal persons by a Member State, not including qualified investors. c) An offer of securities aimed at investors who acquire securities for a minimum amount of 100,000 euros per investor, for each separate offer. d) An offer of securities whose unit nominal value is at least 100,000 euros. e) An offer of securities for a total amount in the European Union of less than 5,000,000 euros, which shall be calculated over a period of 12 months. 3 In the case of the placement of the issues contemplated in sections b), c), d) and e) of the previous section, addressed to the general public by means of any form of advertising communication, an entity authorized to provide investment services for the purpose of trading the securities issued. This obligation shall not apply to the exercise of the activity of duly authorized participative financing platforms.

3 Definitions

"AML"

AML is an acronym for Anti-Money Laundering. It is used primarily in the financial, legal and compliance sectors to develop standard controls that companies and organizations must implement in order to prevent, identify and report suspicious money laundering behavior.

"Bamboo Burning Yearly Party"

Annual lottery system organized at Bamboo Defi. It is participated through the burning of BAMBOO by the participating users. The prize is accumulated through the liquidity funds in the sum of 10% of the commissions collected by the BambooDefi team. With these commissions BAMBOO will be repurchased through the liquidity pools and sent to the specific portfolio of the annual lottery to be blocked until the lottery date.

"Bounties"

Rewards that Bamboo DeFi users can receive during the validity and use of the platform.

"ChainX"

It is a decentralized exchange used to exchange cryptoactives. For more information: <https://chainx.org/>

"CNMV"

It is the body responsible in Spain for the supervision and inspection of the Spanish stock markets and the activity of all those involved in them.

"Circulating Cap"

Business capitalization based on tokens in circulation and market price.

"Active Crypto"

Generic word to define any crypto currency or token, although technically there are differences between a crypto currency and a token, in practice they are operationally similar.

"Bamboo DeFi"

Collaborative platform, object of the IEO (as this term is defined below) described in this Whitepaper, through which the users of this platform will be able to make use of services such as: YieldFarming + Yieldfarming with temporary blocking; Staking +

Staking with temporary blocking; voting systems; providing liquidity to pools; receiving raindrops.

"Bamboo Vault"

It is the wallet where the funds collected by the developers through the network fees go and from where they are distributed for the lottery and charity. All users can see it publicly on the web.

"DeFi"

DeFi is short for decentralized finance, as opposed to traditional finance which is centralized. DeFi includes digital assets, protocols, smart contracts and blockchain built dApps that allow you to build various tools and small financial services in a decentralized manner. These can be combined, modified and integrated according to your needs.

"DAO"

Autonomous and decentralized organization that governs itself through its users through protocols and smartcontracts on the Internet.

"Token destruction"

Burned or deleted tokens depending on various assumptions, reducing the number of tokens in circulation increases the value of it.

"EAF"

Financial advice company "PULSAR CAPITAL EAF, S.L.", located in C/GRAN VÍA, 78 - 28013 MADRID (MADRID) and registered in the Madrid Mercantile Registry, in volume 34.946, sheet 180, section 8, page number M-628544 and in the Financial Advice Companies Registry of the CNMV with number 199, with address in Madrid, calle Gran Vía, 78, 28013 Madrid, with C.I.F. number B87598033.

"Issuer"

It is the company APPDETRANSPORTE URBANO SL, B71379507, registered in the Commercial Register of Navarra, volume 1951, book 0, section 8, page NA 38827.

"ERC20 Standard"

It is a technical standard used by Ethereum's intelligent network contracts to implement tokens. The tokens created under this standard meet a set of rules to accurately predict how they will work in different third-party applications and on the Ethereum network itself. By creating an intelligent contract using this standard, anyone can create a token that can be mapped, represented, and operated in different wallets, Exchanges, and other applications.

"Exchanges"

Unofficial markets where tokens are exchanged and listed.

"Hardcap"

Within the framework of an "Initial Exchange Offering" the hardcap is a monetary amount that defines the maximum collection that the project considers sufficient to be able to develop, when reaching this limit the IEO ends automatically.

"IEO"

Subsequent public sale of the token to investors once the Pre-ICO phase has been passed through an Exchange.

"KYC"

Know your customer is the process by which a company verifies and identifies the identity of its customers.

"Liquidity Provider"

"Liquidity provider" facilitates trading of securities and other financial instruments by providing tokens (which are owned by you), so that buyers and sellers can easily trade without having to locate and deal with other individual traders.

"Nexxy Labs"

Commercial name of the company Appdetransporte Urbano SL.

"Pre IEO"

Initial pre-sale of tokens with discount to investors.

"Raindrop"

Lottery game established in the Bambo DeFi platform so that the user who participates can acquire more BAMBOO. When having to deliver or burn Bamboo the platform guarantees a stability in the price, trying to avoid or smooth the possible inflation of the token price.

"Security Token"

Token that differs from the "utility token" because it can represent the capital or debt of a project start-up, involve an investment of money, or an expectation of profit⁵.

⁵ In that sense, we can cite the "Howey Test" that is in force in the United States. It is a method by which one can prove whether a certain economic action is an investment contract or not. Its creation dates back to 1946, when the U.S. Supreme Court handled a monumental case, known as SEC vs. Howey, which would lay the foundation for the now infamous Howey Test. The case was about establishing a test of whether a particular agreement involves an investment contract or not. The test consisted of a series of parameters that would define whether a transaction would be called an investment contract. Those parameters are: it is an investment of money; the investment is in a joint venture; there is an expectation of profit from the work of the promoters or the third party.

"Smart Contract"

It is a computer program capable of automatically executing the pre-established conditions in it, according to certain parameters.

"Stake"

Process by which an active crypto is frozen, with no possibility of being transferred, for a determined period of time in exchange for a return, normally a % more of that same active crypto.

"Softcap"

Within the framework of the "Initial Exchange Offering" the softcap is a monetary amount that defines the minimum collection that the project needs to be able to develop. If during the IEO the softcap is not reached, normally the invested amount is returned and the IEO is considered as failed.

"Blockchain Technology"

Distributed transactional database, made up of chains of blocks designed to avoid modification once a data has been published. This is achieved through peer-to-peer (P2P) networks, with consensus generated through a workable test (PoW) algorithm and by cryptographically linking blocks with reliable time stamping.

"Token Bamboo DeFi"

Standard ERC20 token of the Ethereum network to be issued by Nexxo Labs on Bamboo DeFi.

"Limited Edition Token"

Maximum number of tokens that can be issued during the life of the project.

"Bamboo DeFi User"

From Nexxyo Labs' point of view an active user is the Bamboo fork who actively participates in the Bamboo DeFi platform.

"Utility Token"

A token that represents a right to use a product or service, or has some other specific function in a platform ecosystem.

"Whitepaper"

Basic document that contains essential information regarding the broadcast and platform called Bamboo DeFi, and the tokens to be broadcast.

"Yield Farming"

"Yield Farming", is an activity that Bamboo DeFi forks can do to invest their bamboos and get the highest yield. It is a common practice of Decentralized Finance.

4 Interpretation

1. In this Whitepaper, capitalized terms and expressions will have the meaning given to them in the previous section called "Definitions".

2. Plural terms must include their singular and vice versa.

3. Any reference to any regulation shall be deemed to be made to such regulation as promulgated, amended or extended, as the case may be.

4. Any reference to "including" or similar term shall be construed as "including, without limitation" or "including, but not limited to," as appropriate.

5 Entity authorized to provide the investment service

Nexxyo Labs has designated Pulsar Capital EAFI as the authorized entity to provide investment services for the issuance of this issue.

This under the provisions of:

- (i) Article 35.3 of the Securities Market Law
- (ii) the criteria published by the CNMV⁶ (hereinafter "CNMV criteria").

Therefore, Pulsar Capital EAFI has carried out the general supervision of the issuance process and validation of the information to be delivered to investors. This is to allow the investor to make an informed investment decision.

Pulsar Capital EAFI has concluded that the information that Nexxyo Labs has collected and published complies with the regulations and requirements of content, accuracy and clarity that are applicable to it, does not omit relevant data and does not mislead investors.

Pulsar Capital EAFI, as an entity authorized to provide investment services and as the CNMV admits in its criteria, will not perform custody functions of the tokens nor will it perform placement functions.

In the period between November and December 2020, Pulsar Capital EAFI and Nexxyo Labs have held regular meetings and communications (both by telephone and electronic means). Therefore, Pulsar Capital EAFI has carried out the review, supervision, modification, adjustment and expansion of the information contained in this Whitepaper.

The objective and purpose of this collaboration with Pulsar Capital EAFI has been none other than to prepare a Whitepaper that offers investors who wish to participate in the issuance of Bamboo DeFi all the information and data necessary to ensure that investment decisions are properly based.

Pulsar Capital EAFI to carry out its work, examined, among others, the following documentation

⁶ In publications of February 8, 2018 "Considerations of the CNMV on cryptocurrencies and ICOs aimed at professionals in the financial sector" and of September 20, 2018 "Criteria in relation to ICOs".

1. Nexxyo Labs' deed of incorporation and subsequent relevant deeds regarding the status of the company, partners, etc.
2. Different versions of the draft White Paper.
3. Nexxyo Labs' agreement with the CHAINX exchange

Pulsar Capital EAFI planned the following milestones in the provision of its services:

1. Audit Agreement between Pulsar Capital EAFI and Nexxyo Labs.
2. Access to all the information of the BambooDeFi issue project.
3. Analysis and questions about the information of the BambooDeFi emission project.
4. Meeting to ask for initial information and solve doubts.
5. Document that collects the doubts about the initial information.
6. Informal communication of additional doubts.
7. Document about the requirements of the Whitepaper.
8. Document of evaluation of BambooDeFi emission.
9. Review of the white paper modifications.
10. Final audit on BambooDeFi Whitepaper.

Once Pulsar Capital EAFI fulfilled the procedures described above, Pulsar Capital EAFI proceeded to validate this Whitepaper, issuing the following favorable opinions in relation to it:

- i. That this Whitepaper has included all the necessary information, in a clear and concise way, about the type of investment that will be made in relation to the issuance of the Bamboo DeFi token, as well as the risk associated with these investments.
- ii. That the Whitepaper provides all the necessary information, in a truthful, clear, concise and understandable manner so that the investor can understand both the business model and the allocation of the funds and the risks assumed when investing in the Bamboo DeFi, without omitting relevant data and without misleading investors.
- iii. That the Whitepaper allows the investor to make an informed investment decision.
- iv. And that the information that Nexxyo Labs makes public through this whitepaper, complies with the regulations and requirements of content, accuracy and clarity that apply to it.

6 Issuer

"Nexxyo labs" is the trade name of the company APPDETRANSPORTE URBANO SL, B71379507, registered in the Commercial Register of Navarra, volume 1951, book 0, section 8, page NA 38827. The sole administrator of Nexxyo Labs is Mr. Daniel Valdés Aráiz .

7 Responsibility of the Whitepaper .

Daniel Valdés Aráiz as administrator with DNI 72.817.870-P, in his capacity as administrator of Nexxyo Labs

- Assumes in name and on behalf of the same the responsibility of this Whitepaper.
- He confirms the veracity of the content of this Whitepaper and that no relevant data is omitted or concealed.

8 Summary.

BambooDefi is a decentralized global ecosystem used to exchange, store and "grow" crypto currencies.

It offers a reward program for all its users based on:

- ★ YieldFarming + Yieldfarming program with temporary blocking,
- ★ Staking + Staking program with time lock,
- ★ Voting system,
- ★ Liquidity pools formed by liquidity providers.
- ★ Raindrop and Bamboo Burn Yearly Par (BBYP)

All liquidity (LP) providers are generously rewarded for their contributions to liquidity pools.

These rewards are based on a four-fold performance system:

- ★ Distribution of the SWAPS commission for the liquidity providers.
- ★ Generation for BAMBOO holders: They get more BAMBOO if they use it in the STAKE system and improve the payment of rewards in the YieldFarming.
- ★ Distribution of dynamic yield multiplier bonds among the different liquidity funds.

- ★ Distribution of 50% of the profits generated by the Raindrop system for users with active liquidity pools and blocked BAMBOO in the Staking portfolio.

The developer of the BambooDefi ecosystem is Nexxyo Labs. It is a software development company, based in Spain, that has created Aurora ATMs, OuterRing MMO, Experiencia360 and several diverse technological products, including bots and financial tools for third parties.

Complete information about Nexxyo Labs can be found on the company's official website <https://nexxyolabs.com/>.

Nexxyo Labs' products include

- ★ BambooDefi
- ★ Aurora Crypto Machines
- ★ Maniac Panda games
- ★ Nexxyo
- ★ Econelec +
- ★ Experiencia 360
- ★ Various mobile and web applications.

The main technological supplier of BambooDefi is Kindynos and its legal supplier is Ferrer-bonsoms & Sanjurjo Abogados.

You can find complete information about these companies in their official websites:

- ★ <https://kindynos.mx/>
- ★ <https://ferrer-bonsoms.com/en/>

Kindynos is a fintech company created to produce and deploy high quality technical solutions for companies or individuals. It focuses on block chain technology, decentralized systems, fintech and payment processors.

Ferrer-Bonsoms & Sanjurjo, Abogados is a legal advice company with offices in Madrid, Pamplona, Seville and Valladolid.

9 Summary

The ecosystem of BambooDefi consists of

- Wallet
- Liquidity Pools
- Raindrop
- DeFi exchange
- Governance system
- Bamboo Vault

Wallet

Bamboo Wallet is a multi-currency portfolio that allows the safe storage, transfer, staking and transfer of currencies and tokens to the liquidity pool as a liquidity provider.

The Bamboo Wallet is an important part of the BambooDefi ecosystem. You can track all information about the staking system, liquidity provision, raindrop, transactions and other important information.

Liquidity Pools

BambooDefi liquidity providers are rewarded with a proportional share of the trade rates generated by each pool they provide liquidity to. However, unlike the other DEFIs, liquidity providers will continue to receive a share of the trading rates even after they have withdrawn their liquidity from the pool, as long as the liquidity exceeds the 60 day period.

Each trading pair will have a 0.3% fee, this fee will be exchanged to BAMBOO and then distributed to the past and present liquidity providers of each pool.

Of this 0.3%:

- ★ The 0.06% will be sent to the BAMBOOVAULT,
- ★ 0.20% will be distributed to active liquidity providers,
- ★ The 0.04% will be changed to BAMBOO (through BambooDefi) and distributed among the BAMBOO holders.

This system guarantees that the first LPs will continue to obtain long term benefits even after they withdraw their main assets, as long as they keep BAMBOO in the staking portfolio and their contributed liquidity exceeds the estimated maturity period.

BAMBOO holders will have to keep it in the staking system, blocking a minimum of 10.000 BAMBOO to be rewarded by a 0,04% distribution plan. The rewards will be proportional to the amount of BAMBOO stored in the portfolio against the total of the BAMBOO fund in the staking system.

Raindrop

Raindrop is an exciting game and an extra opportunity to win more BAMBOO. It is a lottery system created to control inflation, support BAMBOO prices and reduce total and current supply.

There are two types of lottery:

- ★ Bamboo Raindrop
- ★ Bamboo Burn Yearly Party

Bamboo Raindrop

Users can purchase unique numbers for BAMBOO. From these numbers, nine numbers will be chosen at random every 10 days. 90% of the BAMBOO will be distributed equally among the 9 lucky ones. The remaining 10% will be sent to Bamboo Vault for the support and development of the platform.

Bamboo Burn Yearly Party

It is based on the need for users to burn BAMBOO to participate in this annual lottery. The jackpot is accumulated through the liquidity funds in the sum of 10% of the commissions collected by the BambooDefi team. With these commissions BAMBOO will be repurchased through the liquidity pools and sent to the specific portfolio of the annual lottery to be blocked until the lottery date. The lottery takes place between all participating numbers, therefore there is always a winner.

DeFi exchange

The Defi exchange is a decentralized exchange with its own liquidity pools, which allows traders to make an instantaneous exchange of all the assets provided, according to the prices formed by the liquidity pool.

System of government

Governance systems provide ecosystem users with voting rights so they can influence important decisions, such as platform improvements and new liquidity pools. The community decides everything from developer fees, adding new liquidity pools, rebalancing or deactivating inactive pools.

Our goal is to involve the BAMBOO token holders as much as possible in the important decision making process and in the construction of the BambooDefi ecosystem, in order to make the project as democratic and popular as possible, and to interest the users in the transmission of the BAMBOO tokens to the staking system.

Any user, once his portfolio is connected, will be able to launch new proposals and vote for the active ones.

Bamboo Vault

BambooVault will accumulate funds from the Liquidity and Raindrop Pools to support and develop the platform and to control the emission of BAMBOO in order to achieve stability in the development of the economy.

10 Summary of the BAMBOODEFI newsletter:

- November and December 2020 private pre-sale of Token Bamboo

Its objective is to support the initial development of the project. As it is a private pre-sale, the token's sale price is lower (0.20 euros per token), which could be an incentive for the investor who trusts the platform, within the risks referred to in this Whitepaper . The total number of tokens offered in this initial period is 2,500,000 tokens, that is, 500,000 euros.

- December 25 to January 31 Initial Exchange Offer in the CHAINX Central Exchange House:

The issue will be of 6,166,666 tokens, with different starting prices according to the dates. Specific:

1st ROUND: from 25/12/2020 to 05/01/2021, initial value of 0.3 euros per Bamboo. In any case, this value may vary due to market changes beyond the control of the issuer, and for which we are not responsible. The total expected sale (hardcap) for this phase of 1.666.666 BAMBOO TOKENS. The total that could be collected in this phase is 500,000 euros.

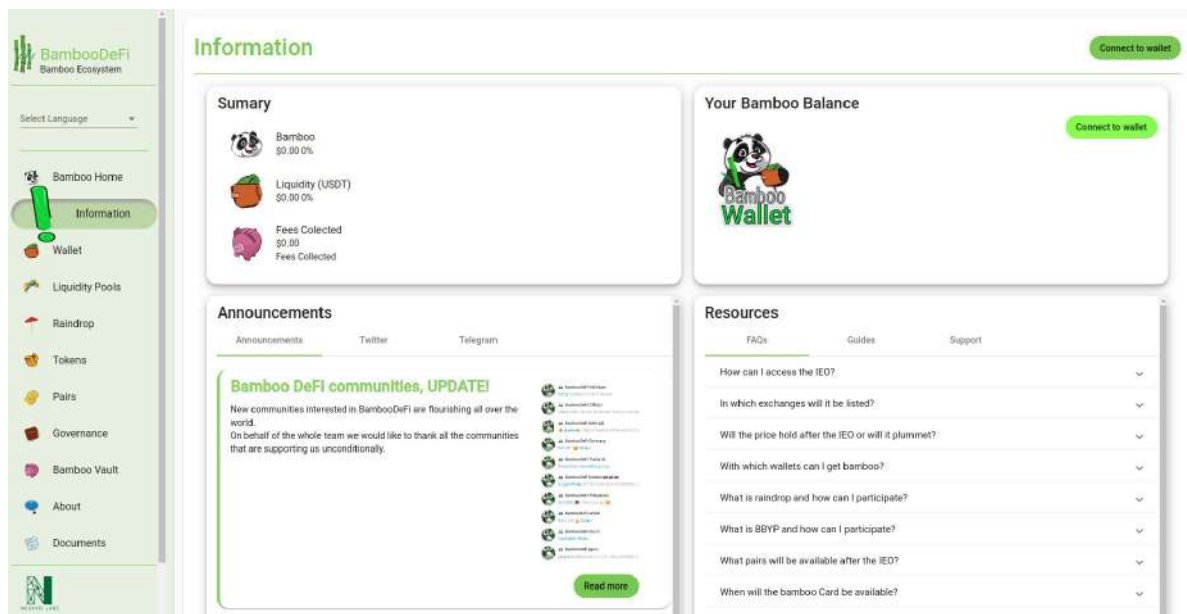

2nd ROUND: 06/01/2021 to 16/01/2021, the initial expected value of 0.4 euros per bamboo. In any case, this value may vary due to market changes outside the control of the issuer, for which we are not responsible. The total expected sale (hardcap) for this phase of 2,000,000 BAMBOO TOKENS. The total that could be collected in this phase is 800,000 euros.

3rd ROUND: 17/01/2021 to 30/01/2021, the initial expected value of 0.5 euros per bamboo. In any case, this value may vary due to market changes outside the control of the issuer, for which we are not responsible. The total expected sale (hardcap) for this phase of 2,500,000 BAMBOO TOKENS. The total that could be collected in this phase is 1,250,000 euros.

Therefore, the total sale of the Bamboo token would raise 3,050,000 euros for the development of the project.

Those tokens that have not been sold will be burned, to ensure the value of the tokens and guarantee the continuity of the project.

11 BambooDeFi Brand

Why do we use a Panda as a brand image?

The Giant Panda is one of the most powerful creatures. The Panda symbolizes the ability to find balance and harmony in life, the ability to connect all the smallest details of existence for a harmonious outcome.

The BambooDefi development team believes that this perfectly reflects what we want for our ecosystem. It is an easy to use tool that maintains a balance between utility, security, reliability, stability and profitability, combining different aspects and always looking for the best result.

The Panda represents soft power in many cultures. Often you cannot solve the problem with brute force, but with a soft and firm approach you get the best results. We know that firmness and softness in launching the platform and in creating approaches to other projects will provide us with the desired results and will help us gain the respect of the users and the DeFi ecosystem.

We would like to mention the other meanings that the Panda has. It is a combination of peace and good luck, a positive outlook on life, the ability to change the situation for the better. The Panda also symbolizes perseverance in achieving goals.

All these values are directly related to the focus of our betting system and liquidity providers. Patience pays off over time and brings great results. Not surprisingly, the Panda also symbolizes the importance of patience.

The choice of the Panda and Bamboo as the brand image of BambooDefi is based on their properties and traits, being the favorite animal of our team.

The Panda is a strong and powerful animal. But even the strongest and most powerful creatures need support. By promoting the BambooDefi brand around the world, we help protect the panda bear from extinction, as part of our profits will be spent to support the panda at the Giant Panda Breeding Research Foundation in Chengdu.

We are well aware that only by uniting the entire world, can we achieve the best and most remarkable results. Support us as we support the Panda. Together, we will be even stronger and can implement all our ideas to make life better, safer and more stable.

12 Main characteristics of BambooDefi

Take a look at our main features that make us stand out from other DeFi projects.

- 1 ✨ BambooDefi carries out a private pre-sale to support the development of the project and the growth of the BAMBOO ecosystem.
- 2 ✨ The main difference between BambooDefi and other DeFi exchanges is that the BAMBOO team will get NOTHING from the growth of BAMBOO. Other projects receive a percentage of each token generated by their DeFi system. All BAMBOOs generated in the staking system will be distributed among the users of the BAMBOO ecosystem. This will provide a great growth of BambooDefi.
- 3 ✨ The BAMBOO protocol provides the ability to change the emission level of the BAMBOO token to prevent the price of the BAMBOO token from falling on external exchanges in the first two years since the beginning of the BambooDefi ecosystem formation.
- 4 ✨ Each year, the reward for the mined block will decrease to 1 BAMBOO per 1 mined block. This policy will increase the price of the BAMBOO token as the project ecosystem grows in the future.
- 5 ✨ The BambooDefi team will be rewarded with BAMBOO tokens received through the exchange fees and through the Raindrop system. The distribution of the BAMBOO tokens is explained in detail in this Whitepaper.
- 6 ✨ All BAMBOO tokens received by the team have a minimum locking period of 30 days.
- 7 ✨ The BambooDefi team believes that the fair distribution of all BAMBOO tokens among the users of the ecosystem will allow the significant growth of the project and the well-being of the users.
- 8 ✨ BambooDefi provides maximum rewards for BAMBOO token holders to attract more users to the ecosystem. We have specially developed a reward system to encourage our token holders for their activity within the system and for keeping BAMBOO in their portfolios and staking system.

- 9 ✨ BambooDefi creates maximum comfort conditions for BAMBOO holders. Liquidity providers will continue to be rewarded even if they withdraw their assets from the liquidity pool, if they keep the BAMBOO tokens locked in the staking system.
- 10 ✨ BambooDefi uses the Advanced Market Maker (AMM) to offer foreign exchange liquidity to the crypto-currency pairs provided by the liquidity providers (LPS). Advanced Market Maker (AMM) is an automated system that provides liquidity to BambooDefi. AMM allows to replace the traditional order book with liquidity funds that are preliminarily funded by both assets of the trading pair. Liquidity is provided by liquidity providers (LPS) - the users of BambooDefi who earn passive income on tokens that are kept within the portfolio and blocked in the liquidity pools, to obtain revenue through trading rates.
- 11 ✨ Para increase liquidity and distribute it evenly among the assets that need it, liquidity multipliers will be used, which will help provide the necessary liquidity.
- 12 ✨ The RAINDROP system is created to control the inflation of BAMBOO tokens, support the BAMBOO price and reduce the total and current supply of issued tokens.

13 Vision of BambooDefi.

Our vision is to create a DeFi exchange platform, which, in addition to providing traders with high liquidity, allows them to trade assets on the platform at the most attractive price. It provides huge and diverse profit opportunities, using various incentive programs aimed at attracting a large number of users to the BambooDefi ecosystem, in order to make the exchange the most stable and convenient for its user.

The future demand for BAMBOO and the price of the token depends on how developed the BambooDefi ecosystem is and how many people use the BambooDefi products.

We are very aware that for the stable development of BambooDefi and the growth of the ecosystem and the number of users, it is necessary to maintain a stable price of the BAMBOO token and to avoid its price to fall. In order to avoid inflation and to assure the

control of the emission, we have developed a series of measures that allow to control the number of BAMBOO, regulating the price and trying to avoid the fall of the price.

Our emission policy, together with the system of incentives for our users, are the key elements that ensure the stability of the system.

We strive to become a solid supplier in the DeFi market, as we believe in the perspective of the DeFi industry and its ability to solve existing financial problems and improve the lives of ordinary people.

The cryptography industry combines innovation with the best technologies. This is an area where the latest developments and innovative technologies are available. The emergence of DeFi's projects clearly showed how promising and multifaceted the cryptography industry can be and how many opportunities it offers to people. The rapid growth in the number of users of DeFi projects clearly shows the need for these services and indicates the great potential for development in the DeFi sector.

The BambooDefi platform is based on Blockchain technology. It is reliable and protected against database forgery. The blockchain is also transparent and allows DeFi projects to distribute resources fairly.

Within the portfolio, users can follow the growth of BAMBOO, participate in the provision of liquidity for the liquidity pools, participate in staking and various incentive programs for customers.

In BambooDefi, traders can trade different assets at an attractive price. The DeFi sector allows users to solve various problems that arise in the financial sector, to unite people from all over the world, regardless of their place of residence, citizenship, social and legal status, wealth and education.

This is a great opportunity to make money. We strive not only to be a part of the multi-billion dollar DeFi industry, but also to be a part of it.

14 BambooDefi mission.

BambooDefi's mission is:

- ★ Create a convenient and secure DeFi exchange with good liquidity and the most attractive prices;
- ★ Provide the opportunity to receive passive income to a wide variety of users, regardless of their place of residence, citizenship, social and political status, level of wealth and education;
- ★ Develop and implement a fair incentive system for BambooDefi users;
- ★ Maintain a stable price for the BAMBOO token by controlling the level of token emission;
- ★ List the BAMBOO token on all major exchanges;
- ★ Ensure the constant and stable growth of the BambooDefi ecosystem;
- ★ Develop and actively promote the BAMBOO brand worldwide, increasing the value and attractiveness of BambooDefi products and increasing the demand for BAMBOO tokens;
- ★ Bring the BambooDefi project to the level of the DeFi industry leaders, constantly improving the products within the ecosystem and increasing the number of BambooDefi users.

15 Business Plan

Industry Overview

The development of the DeFi segment of the crypto currency market has given new life to the industry. DEFI's projects help solve many of the problems in the crypto-currency industry, making it more democratic and accessible to the people.

The current economic crisis has shown serious problems with the existing monetary system. The drop in production in many countries, the closure of companies, combined with large cash injections by state authorities and anti-crisis measures, led to an increase in the level of inflation. This is despite the fact that the income of the majority of the population has decreased.

The inability of the current authorities to control the crisis situation led the population to start looking for alternative financial opportunities and ways to invest capital that did not depend on the actions of the authorities.

The DEFI ecosystem not only allows people to earn additional income and solve their financial problems, but also unites all people based on the principles of interaction, equality and fair distribution of resources. These factors are responsible for stable user activity as well as stable growth throughout the sector.

According to the cryptographic market data aggregator Dune Analytics, the total number of unique DeFi user addresses is approximately 860,000, which is about 10 times more than last year. However, this figure is cumulative, and users can have multiple addresses⁷.

⁷ <https://duneanalytics.com/rchen8/defi-users-over-time>

The number of DeFi users increased by almost 40% in October, from about 555,000 to 775,000.

Another 85,000 users joined the DeFi sector during the first 11 days of November, increasing the total number of users by 11% in less than two weeks. This means that the number of DeFi users has increased by 55% since the beginning of October.

This graph clearly shows that the need for DeFi products is only increasing and the number of users is steadily rising.

12 month inflow of funds into the DeFi space

Source: DeFiPulse.com

The DeFi sector began to gain momentum in early 2018, but it was only in 2019 that significant funds began to flow into the DeFi⁸.

In the 12 months from January to December 2019, investment in DeFi products increased by 200% to \$700 million. By early July 2020, the market had more than doubled again to \$1.72 billion. In just 12 days from July 3, 2020 to July 15, 2020, DeFi products received another \$700 million, increasing market volume by 47% to \$2.42 billion.

On July 21, 2020, the volume of funds raised in the DeFi sector exceeded \$3 billion for the first time. 6 days later, investors invested another \$673 million in DeFi products. In the 30 days to August 11, 2020, DeFi volume nearly doubled, from \$2.45 billion to \$4.74 billion.

⁸ <https://d2f01vdlwcs5n6.cloudfront.net/wp-content/uploads/2020/09/07114705/Coinsilium-report.pdf>

On August 28, the total value of DeFi products was more than \$7.38 billion. This growth is beyond exponential and continues, pointing to the enormous potential of the market. Throughout 2020, DeFi remains the fastest growing sector of digital assets.

According to coinmarketcap.com, DeFi's current market cap is \$15.42 billion.⁹

Prerequisites for the development of the DeFi sector

We are living in an era of extremely low interest rates, as a result of which investors are increasingly looking for assets that can provide a return.

The economic crisis and the fall in production are forcing central banks to reduce interest rates to historical lows, leaving them close to zero. After all, the economy needs to be supported by cheap loans.

At the same time, due to active state monetary influences, inflation is rising in almost all countries. Keeping money in a bank becomes economically unprofitable, as all interest income is eaten up by inflation.

Almost 100% of FTSE 100 companies and over 80% of S&P 500 companies pay dividends to investors. But because of the economic crisis, the profits of these companies have fallen dramatically and investors may receive no dividends or extremely small amounts.

Traditional eternal securities, such as gold and other precious metals, do not bring dividends, but serve only as a means of preserving capital.

DeFi transforms this model by offering investors a great alternative to invest. A special feature of DeFi's products is that cryptographic investors can now earn returns by using a staking system, cultivating, providing liquidity and using other DeFi tools that help generate passive income. Projects like BambooDeFi even offer various types of passive income using different tools, further increasing the overall return of the investor.

Even using low-risk stablecoins such as USDC or USDT, investors can earn more than 15% of annual profit using credit platforms or liquidity funds.

The current financial system is outdated, and the crisis has further exposed all its shortcomings. The existing DeFi mechanisms allow users to interact directly with each other, without the involvement of authorities, as well as various intermediaries.

⁹ <https://coinmarketcap.com/defi/>

Exchanges DeFi

The third quarter of 2020 was a peak for DeFi exchanges, demonstrating the overall growth trend in the DeFi segment.

The overall popularity of the Defi segment was also reflected in the Exchanges DeFi, which, thanks to the use of Advanced Market Maker, which allows users to attract liquidity to the exchanges to earn rewards for completed transactions, eliminated the problem of lack of liquidity, thus attracting some traders from the centralized exchanges to their platforms.

The use of Advanced Market Maker and private liquidity providers allows DeFi exchanges to make an instantaneous exchange of the assets provided in the exchanges' quotes and have enough liquidity to work stably. DeFi's exchange listing was made available to all cryptographic startups.

Decentralized exchanges (DEX) have shown strong growth in trading volume, with the top 10 DEX reaching a trading volume of \$30.4B in September¹⁰.

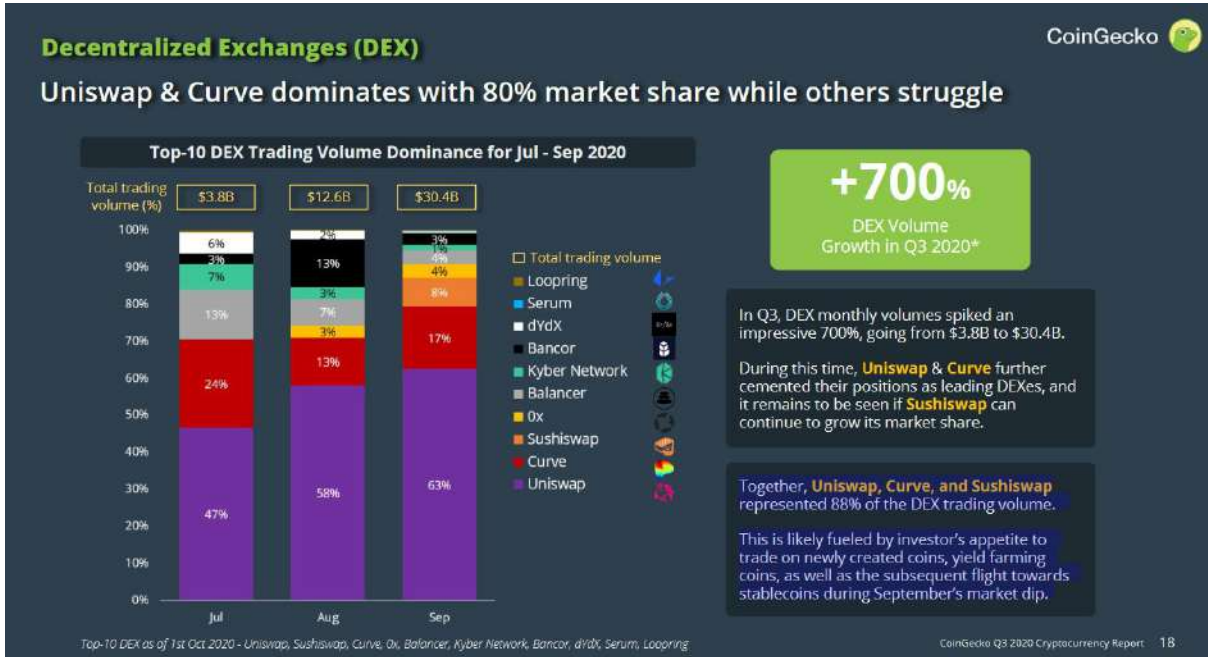

In the third quarter, the first 10 DEX showed that their trading volume increased from 3.8B in July to 30.4B in September. The total increase for 3 months of the 3rd quarter is more than 700%. This contrasts with the increase from 171.9B in July to 300.2B in September for the centralized exchanges (CEX).

¹⁰ <https://assets.coingecko.com/reports/2020-Q3-Report/CoinGecko-2020-Q3-Full-Report.pdf>

It should also be noted that, in contrast to the stable growth of the DEX on the centralized exchanges, there was a decrease in trading volume from \$314 billion in August to \$300.2 billion in September, a drop of 5%. This indicates that some users of the centralized exchanges are switching to the decentralized ones.

At the same time, the centralized exchanges still have the bulk of the trading volume, but there is a clear erosion of market share by the DEX. Currently, the volume of DEX is 6% of CEX. This graph clearly shows that DEX has good growth potential in the future.

About the contribution of individual DeFi trades to total trading volumes, we should mention Uniswap, which had less than 50% of total DEX volume in July, and by the end of September its market share had grown to 63%.

Uniswap is followed by Curve, whose trading volume fell from 24% in July to 13% in August, and returned to 17% in September.

Sushiswap, a fork in Uniswap's business made on August 28, managed to take 8% of total market share by the end of September. The share of other DeFi exchanges is less than 4% of the total volume.

The growing popularity of DeFi exchanges is evidenced by the fact that 110,000 new users have joined the Uniswap platform in the last month, clearly demonstrating how popular DeFi exchange services are today. As of November 26, the total number of Uniswap platform users exceeded 560,000¹¹.

The number of assets listed in Uniswap is also growing rapidly. The number of pairs on the platform has increased by 34%, from about 16,200 to 21,700 in 30 days. This rapid growth is due to the accessibility of being listed on Uniswap.

¹¹ <https://duneanalytics.com/queries/2740/5532>

The drop in Curve trade volumes in August and September did not affect the total number of users who joined this DeFi exchange. The graph shows that the number of users is constantly growing¹².

In September, the number of Curve users exceeded 15,000. At this time, more than 21,000 users are using Curve's services.

¹² <https://duneanalytics.com/queries/4177/8129>

Sushiswap, a fork in Uniswap, began operating after August 28. During this time, Sushiswap has shown rapid growth and an increase in the number of users. Currently, over 22,000 users work at Sushiswap¹³.

Conclusions

Analysis of the documents and statistics provided shows that the DeFi industry sector is growing rapidly and that the growth potential is not yet over. The economic crisis and the authorities' inability to cope with the current situation are forcing people to look for alternative solutions.

The measures taken by the state authorities do not allow to stop the growth of inflation, the purchasing power of the population decreases significantly, which in turn slows down the economy even more.

The DeFi sector is an alternative to the existing financial system, in which nothing depends on the opinion of the common person. In contrast to the current state system, in DEFI projects token holders are able to influence important product decisions.

DeFi offer several ways to earn money for active users to participate in the project. People are also attracted to the DeFi sector because of a fair distribution of funds that does not depend on the will of a particular person or group of people.

Along with the overall growth in popularity of the DeFi sector, the number of users of DeFi exchanges is also growing. There is enormous potential in this branch of activity, as DeFi exchanges currently occupy only 6% of the total volume of crypto currency exchanges.

Users of centralized exchanges are gradually moving to the DeFi sector, as they see the advantages of fair trade, lack of liquidity problems, low fees, security, anonymity, lack of government interference in exchange activities, and other characteristics that distinguish DeFi exchanges from centralized ones.

While listing on centralized exchanges is expensive and inaccessible to young and developing businesses, listing on DeFi exchanges costs nothing or is very inexpensive. This makes DeFi exchanges truly popular and accessible to everyone, regardless of country of residence, citizenship, social status and wealth.

¹³ <https://duneanalytics.com/queries/11519/22883>

Each token holder, by connecting his or her portfolio to the exchange's liquidity pool, can become a liquidity provider and earn money on the exchange. The possibility of passive earnings from maintaining crypto-currency attracts even more users to Defi exchanges.

16 FINANCIAL INFORMATION

Financial information for the last and only year:

Nexxyo Labs was incorporated in June 2019. The company was incorporated with a share capital of 3,000 euros. It is currently up to date with tax payments and other obligations (such as payments to the Social Security).

Estimation of the budget distribution

The following information is an estimate of the budget distribution, assuming that the IEO's hardcap is reached, which can vary considerably depending on multiple factors such as the amount collected, variable market conditions, etc.

CONCEPT PERCENTAGE

Development 45%.

Security audits 2%

Marketing 20%.

Legal 3%

Operating costs 25%.

Donations 5%.

Under "Development" are included the items for internal staff recruitment and the specific items for development. Operating expenses include all fixed and variable costs of the company, including the list of Exchanges, account audits, tax payments, etc.

Information on litigation that may have a significant effect on BambooDeFi

There are no legal or administrative proceedings or claims against Nexxyo Labs as of the date of this White Paper.

17 Product mechanism

The BambooDeFi ecosystem consists of several interconnected products:

- ★ - Wallet.
- ★ - Liquidity pool
- ★ - Raindrop.
- ★ - Exchange DeFi.
- ★ - Government system.
- ★ - Bamboo Vault.

It allows BambooDeFi to grow new BAMBOO tokens as the project grows and the number of system users increases, using the staking system.

The ecosystem elements allow BambooDeFi users not only to obtain stake income and provide liquidity to the pools, but also allows the project to distribute the received income fairly among the ecosystem users, to regulate the inflation level and prices of BambooDeFi by burning additional tokens and removing them from the system.

The combination of these elements will ensure the stable operation of the system and give stability to BAMBOO, which will increase the confidence of the users in the system.

18 Exchange

The price of the tokens will depend on how many crypto-currencies are in the liquidity pool. The price differential depends on the proportion and quantity of tokens in the pool. The best exchange price will be when there are more tokens in the pool.

Thanks to the liquidity pools, formed by the liquidity providers, users can exchange two tokens paying a 0.3% exchange rate instantly and without delay.

There are two cases of possible situations that occur during the exchange:

- **a.** If there is a liquidity pool for each asset in the trading pair. In that case, a direct exchange is made and traders have the best prices.

- **b.** If there is no liquidity pool for each asset in the trading pair. In this case, the exchange is made through an additional liquidity pool. For example, a user needs to exchange BNB for USDT, but there is no direct liquidity pool for BNB for USDT. In such a case, the Automated Market Maker (AMM) will provide the liquidity funds available to exchange BNB for ETH and ETH for USDT. The cost of the exchange will increase and influence the price of the currency offered by the liquidity fund.

19 Liquidity pools

Each liquidity pool consists of reserves of two ERC-20 tokens, and issues one ERC-20 reserve token as proof of proportional ownership of the underlying reserves.

- ★ a. Token holders send their tokens to the liquidity pool to become liquidity providers and obtain a reward, paid by users who exchange their cryptosystems using the liquidity pool. At the time of execution, the total amount of exchange fees of the size of 0.3% per exchange will be distributed between the liquidity providers and the BAMBOOVAULT in a proportion of 80% users / 20% BAMBOOVAULT. This fee is charged to finance research and development of the protocol. The fees charged by the development team will have a 30 day lock-in time.
- ★ b. Exchange fees will be transferred to the reserves of the respective liquidity pools. Users will receive their proportionate share when they return the pool tokens to repurchase their share of the reserves.
- ★ c. Liquidity providers are subject to unforeseen losses in the event that the prices of the repurchase tokens differ from their original prices. It is suggested that this fact be considered before making a decision to contribute to a liquidity pool.

20 BOOST System

The BOOST system serves to evenly distribute liquidity within the system. It allows BambooDefi to offer the most profitable prices for the exchange of cryptomoney. It is also a great way to earn extra money for liquidity providers.

Liquidity providers can increase their revenues by using special tools to increase profitability:

- ★ Stake.
- ★ RainDrop.
- ★ Bonus LP YELDFARMING.

Stake

The stake system allows users to make a deposit on BAMBOO tokens to increase their profits thanks to the stake mechanism. There is a minimum amount to receive the reward, which is 500 BAMBOO.

There are two options to use the BAMBOO tokens:

- ★ 1. not to block BAMBOO tokens and to use them at any time without receiving a reward in BAMBOO tokens
- ★ 2. block BAMBOOs in the wallet. If users choose to block BAMBOOs, they can choose a blocking period ranging from 1 day to 5 years.

RainDrop

Unique numbers can be purchased for the Raindrop. Of these numbers, nine will be selected at random every 10 days. Of all purchased numbers, 90% of BAMBOO will be distributed equally among the 9 lucky ones. The remaining 10% will be used to support and develop the project. It is possible to track the distribution history of BAMBOO in the portfolio.

Bonus LP YELDFARMING

Users will be able to track in which pool this bonus will be distributed. This will allow users to access the list of liquid assets eligible for the bonus.

Pools have two ways of getting the x2 multiplier:

- ★ - During the first week on the platform, or
- ★ - Be selected by the community to get a multiplier.

The LP YELDFARMING Bonus system, thanks to the use of the x2 multiplier, allows BambooDefi to distribute the liquidity equally among the pools and send the liquidity to the pool that needs it the most.

BAMBOO WALLET

The BAMBOO Portfolio provides the following convenient tools that allow users not only to track their profits, but also to conveniently manage their accumulated interest. Portfolio users can track their profitability and the speed at which they obtain BAMBOO.

Balance

It allows users to see the benefits accumulated in YieldFarming to understand how much BAMBOO they have accumulated and if they are ready to harvest.

Claim

This feature allows users to conveniently claim their accumulated profit for withdrawal by just a few clicks and paying the gas rates set by the Ethereum network.

Calculator

It allows users to control their profitability by entering the expected amount of liquidity provided, as well as the amount and period of blocking of BAMBOO tokens in the staking system.

21 BAMBOO emission.

The BAMBOO emission is programmed to decrease the emission over time of the BAMBOO, as the BambooDefi ecosystem grows and develops.

This approach is necessary to ensure the stability of the system and to reduce inflation, which means an increase in the price of BAMBOO in foreign exchanges, as demand increases due to the growth of the ecosystem and the increase in the number of users.

During the first year, the reward paid for a mined block is 100 BAMBOO. The reward per block will decrease over the next 6 years to 1 BAMBOO per block and will be set at this level.

During the first two years, the development team can modify the BAMBOO emission to control inflation in case the demand does not match the number of BAMBOOs issued. At the end of the second year, the issue cannot be modified and will remain fixed.

This issuance policy will allow BambooDefi to control the balance between the issuance and the reward, which will significantly reduce inflation and regulate the price of BAMBOO in the exchanges.

Reward for miners for a block	
★ 1er year	★ 100 BAMBOO (the emission can be modified)
★ 2º year	★ 75 BAMBOO (the emission can be modified)
★ 3er year	★ 50 BAMBOO
★ 4º year	★ 25 BAMBOO
★ 5º year	★ 10 BAMBOO
★ 6th year	★ 1 BAMBOO

Analytical and statistical

Users can monitor all prices per pair of BAMBOO crypto currencies, including

- ★ - Liquidity.
- ★ - Trade volume.
- ★ - Total supply, etc.

Users can access our protocol using the following methods:

- ★ Users can access the protocol and its statistics through a dedicated website.
- ★ In the future, BambooDefi will also support access to analytical parameters through the API.BambooDefi, which will be implemented through a system of intelligent contracts in the ETH block chain. It is an open source software with GPL license.

22 Incentive Program

Users of the BambooDefi ecosystem have access to four types of rewards in YIELDFARMING and two types of rewards in STAKING.

The following table is an example explaining the BAMBOO incentive program.

TEMPORALITY stake Bamboo system

Locked capital	1day	7days	15days	30 days	60 days	90days	180days	1year	2years	3years	4years	5years
500	x1,0001	x1,0008	x1,0016	x1,005	x1,03	x1,05	x1,10	x1,50	x2,00	x2,30	x4,6	x5,00
5.000	x1,0004	x1,003	x1,008	x1,03	x1,05	x1,06	x1,15	x1,70	x2,50	x3,10	x6,20	x7,00
10.000	x1,0006	x1,0045	x1,01	x1,06	x1,08	x1,09	x1,20	x1,90	x2,90	x3,90	x7,80	x8,00
50.000	x1,0008	x1,006	x1,013	x1,09	x1,12	x1,13	x1,25	x2,10	x3,30	x4,70	x9,40	x10,00
100.000	x1,001	x1,008	x1,017	x1,12	x1,16	x1,17	x1,30	x2,30	x3,70	x5,00	x10,00	x11,00
500.000	x1,0011	x1,0081	x1,018	x1,15	x1,20	x1,25	x1,40	x2,50	x4,10	x5,50	x11,00	x12,00
5.000.000	x1,0012	x1,0082	x1,0185	x1,18	x1,24	x1,30	x1,50	x2,60	x4,70	x6,00	x12,00	x13,00
25.000.000	x1,0013	x1,0095	x1,02	x1,21	x1,30	x1,40	x1,60	x2,70	x6,00	x10,00	x20,00	x30,00
50.000.000	x1,0014	x1,01	x1,03	x1,25	x1,33	x1,50	x1,70	x2,80	x7,00	x15,00	x30,00	x35,00
100.000.000	x1,0015	x1,011	x1,05	x1,30	x1,50	x1,55	x1,95	x3,00	x8,00	x20,00	x35,00	x40,00

It is the result of the income multiplier in BambooDefi depending on the amount and time of blocking in the staking system.

The attached table shows the profitability calculation, taking into account the multiplier to be applied to the liquidity pool, depending on the amount of funds invested.

With the current configuration, users can block BAMBOO for 5 years. The minimum amount of blocking is 500 BAMBOO. If a user blocks the minimum amount of BAMBOO for 5 years, then in 5 years their amount of BAMBOO tokens will increase by 5 times.

23 How does staking work?

The blocking amount for the staking program is: 500; 5,000; 10,000; 50,000; 100,000; 500,000; 5,000,000; 25,000,000; 50,000,000; 100,000,000 BAMBOO tokens.

The staking system will generate BAMBOO tokens based on the blocked amount and the time of blocking. The profit of the staking system will be added to the BAMBOO portfolio balance once every 24 hours. It will be available to be withdrawn from the wallet at any time the user wants.

24 Bonus multiplier for YIELD FARMING + STAKING

To interest liquidity providers and have an active liquidity pool, a MULTIPLIER BONUS is used for YIELD FARMING + STAKING.

This multiplier is applied according to the sum of BAMBOO tokens that the user has blocked in his staking portfolio, provided that he has an active Liquidity Pool.

The following multipliers will be applied to the amounts blocked for the Bonus

YieldFarming + Staking:	
1	★ 500 x1,001
2	★ 5.000 x1,009
3	★ 10.000 x1,02
4	★ 50.000 x1,1
5	★ 100.000 x1,2
6	★ 500.000 x2
7	★ 5.000.000 x3
8	★ 25.000.000 x4
9	★ 50.000.000 x5
10	★ 100.000.000 x6

25 Raindrop

BambooDefi's Raindrop is a lottery system that was created specifically to control BAMBOO inflation, to support token price stability and to reduce the overall and current supply of BAMBOO tokens.

There are two types of lottery:

- ★ Bamboo Raindrop.
- ★ Bamboo Burn Yearly Party.

Bamboo Raindrop

The conventional raindrop is carried out every 10 days. Users can buy tickets using BAMBOO. 90% of all accumulated BAMBOOs are distributed among 9 winners. The remaining 10% is transferred to the BambooVault. The lottery takes place between all participating numbers, so there are always winners.

This lottery allows:

- ★ Establish price support for the continuous purchase of BAMBOO by users who want to participate in the lottery every 10 days.
- ★ To temporarily reduce the liquidity in the BAMBOO market. This happens because the tokens used in the lottery are blocked for 10 days. This provides better support for the BAMBOO price.

Bamboo Burn Yearly Party

The second lottery is called Bamboo Burn Yearly Party (BBYP). It is based on the need to burn BAMBOO to participate in this annual lottery.

The jackpot is accumulated through the WMA in the amount of 10% of the commissions collected by the BambooDefi team. These BAMBOO tokens will be repurchased through the WMA and sent to the specific portfolio of the annual lottery.

All tokens are blocked until the date of the lottery. The lottery is conducted among all participants, so there is always a winner.

Objective of the Raindrop system

The Raindrop system we have created is designed to perform the following functions:

1 Support the stabilization of BAMBOO 10% of the tokens participating in the lottery are sent to BambooVault. This amount of tokens is blocked for participation in the annual lottery - (BBYP) Bamboo Burn Yearly Party, created to burn extra tokens into the system and control the amount of BAMBOO in circulation.

2 Because all tokens intended for participation in the lottery are blocked for 1 year, liquidity increases. This increases the demand for Bamboo and improves its stability.

3 Reduce the total number of tokens issued due to the burning of BAMBOO.

4 Reduce inflation. Occurs due to user participation in the lottery and subsequent burning of Bamboo

5 Each acquisition of a lottery number by a user generates a benefit for the liquidity providers with whom the corresponding pool interacted. This makes it possible for the liquidity providers to earn extra money.

The combination of these two lottery systems and their interaction helps to regulate the number of tokens in circulation in an appropriate manner, which in turn leads to an increase in the stability of BAMBOO and gives users additional income in the lotteries.

26 Governance

The BambooDefi ecosystem is designed so that the governance of the system is in the hands of its users. The community decides everything: payments to developers, adding new pools, rebalancing and deactivating the pools.

For example: if users decide that BambooDefi should launch a WBTC pool, the developers establish the part of the assets that will be distributed to the pool, as well as when the liquidity providers will be able to withdraw their funds.

This policy creates an incentive for BAMBOO holders to have more BAMBOO tokens in order to obtain the right to vote and make important decisions.

The entire BambooDefi ecosystem is built to encourage users to have more BAMBOO.

Currently, the voting system is based on the BAMBOO GROW RATIO. According to this system, the user receives 1 vote per wallet because the user has BAMBOO blocked in the wallet staking system.

How the voting system works

All proposals submitted into the system have a "grace" period during which they can be read but not voted on. As soon as this time expires, the voting period opens for 10 days.

After voting and reviewing the results, if the proposal is approved by the community, the Nexxyo Labs team begins to implement it. The implementation period will not exceed 30 days, if implementation of this proposal is possible in monetary or technical terms.

To avoid the collapse of the proposal and voting system, making a proposal will cost 10 BAMBOO, which will be burned after the vote.

The right to vote costs 0.1 BAMBOO, being able to make one vote per wallet (all BAMBOOS generated by the voting system will be burned to deduct liquidity from the total offer).

During the first 12 months after launch, all proposals affecting BAMBOOVAULT must also be approved by Nexxyo Labs team. As soon as the decision is made, it will be announced to the community.

Proposals with technical implications will have an implementation period of more than 30 days and will be subject to screening. This will increase the viability of BambooDefi over time. As soon as the decision is made, it will be brought to the attention of the community.

Both the cost of the offer and the cost of the vote may be modified according to market conditions without prior notice.

27 BAMBOO card.

Thanks to our technology partner Kindynos, its experience and developments, we plan to launch our own BAMBOO credit card and mobile application. In this way, we will be able to create an ecosystem where users can not only easily manage the crypto currency, but also exchange their earnings for FIAT money. In this way, we will be able to combine crypto-currency with fiat to provide users with maximum opportunities and comfort in the use of the BambooDefi platform.

We are currently in negotiations with several suppliers, carefully studying the technologies they offer that will ensure the usefulness of the use of the Bamboo Card and its distribution worldwide.

We will work on the integration of the Bamboo cards in our own ATMs, which we have been manufacturing and selling to third parties for many years as private label ATMs. We will use Nexxyo Labs' own division called Aurora Crypto Machines for this purpose.

The ATMs produced by ACM allow our users to deposit, exchange and withdraw euros, dollars, yens, pounds and more than 200 crypto currencies and are available worldwide. More information about the ATMs can be found on the official website: <https://auroracryptomachines.com/>.

BambooDefi offers its users a system in which customers of the platform can easily and quickly switch from BAMBOO to fiat, as well as the possibility to interact with ATMs manufactured by Nexxyo Labs.

This makes BambooDefi a very attractive new alternative to traditional financial services.

28 Technical information

BambooDefi is created from the study of several current protocols such as YAM, SUSHISWAP, UNISWAP v2 and COMPOUND. It is a bifurcation of several protocols to which our own developments were added with substantial improvements such as the Quadruple Incentive System, the Raindrop system and the Staking lock system.

Very important security, frontend and backend improvements were also made. BambooDefi is audited by <https://red4sec.com/en>. As a pre-launch incentive, all project code was tested by Nexxyo and Kindynos.

29 Code Audit

A code audit is a validation of the software's security with respect to warranty requirements by reviewing your code. It is the main and most important process carried out within the management of secure software development. Red4Sec are KuCoin or Neo referenced auditors.

The audit of the code is mainly done by reviewing and reading the code. This code is presented as original source code and through SCs released in testnet. For its validation, reverse engineering techniques and very specialized software are applied.

The BambooDefi ecosystem is formed by many Smart Contracts that interact with each other, all of them are audited by Red4Sec.

Remmediations Review 2 -- 26/10/2020

Vulnerability	State	Notes
Unlimited designation votes	Fixed	
Unbounded Loop in getPriorVotes method	Assumed	
Unsecure Ownership Transfer	Fixed	
Block number stored in a wrong type	Fixed	
GAS Optimization	Assumed	
Improvable Code Quality	Partially fixed	
Absence of Unit Test	Assumed	
Outdated Third-Party Libraries	Fixed	
Provide License for Third-Party Code	Assumed	

The developers of BambooDefi think that all software development should be reviewed to solve its possible vulnerabilities and evaluate the risks, and that's why it was decided to audit the whole project before launching it. This practice is part of the security management standards implemented by NexxyoLabs for all its developments.

Information about BambooDefi can be found here:
https://www.BambooDefi.com/assets/Audit_en.pdf

The results of the current audit are:

- Unit test staking.
 - Pass the audit of this contract.

- Raindrop.
 - Unit test raindrop.
 - Pass the audit of this Smart Contract.

- Connect the frontend of the web platform to the Testnet
 - Intensive tests on the Testnet.

- Publication of all contracts on the Mainnet

- Publish the web frontend on the Mainnet¹⁴.

30 BAMBOO's values

BAMBOO offers a powerful alternative to traditional financial services and other DEFI products. A special feature of BambooDefi is the interaction of cryptography with the existing financial system by issuing a BAMBOO Card, which can be used not only to make cash payments using crypto-currency or fiat, but also by using a bank card in the ATMs of our brand Aurora Crypto Machines ,which are distributed worldwide.
<https://auroracryptomachines.com>

The attraction of BambooDefi is given by the presence of its own Exchange included in the system. Nexxyo Labs' commercial contacts, established in the blockchain environment for many years, guarantee a fast adoption and implementation of the created products, as well as the quotation in the main exchange houses.

BambooDefi is a decentralized protocol deployed in the Ethereum blockchain. Each transaction, such as deposits and withdrawals, is registered in the network, everything works in an absolutely transparent way.

Nexxyo Labs' role is that of technology provider contributing to the development of the product being completely transparent. BAMBOO is open source and welcomes the decentralized contribution of the community.

¹⁴ https://www.BambooDefi.com/assets/Audit_en.pdf

31 Price sustainability strategy

- ★ - Nexxyo Labs will burn 10% of all tokens stored at BAMBOOVAULT.
- ★ - The 20% of the capital collected from the private pre-sale and the IEO will be used to buy back BAMBOO when the ecosystem is launched to the market.
- ★ - All BAMBOOs repurchased on the market will be burned.
- ★ - All tokens transferred from BambooDefi to BAMBOOVAULT will have a 30 day lockout time.

32 Ecological Awareness

Together with Nexxyo Labs, we will donate 5% of all profits from the BambooDefi project to the Chengdu Giant Panda Breeding Research Foundation website <http://www.pandahome.org>.

It is a legally independent non-profit organization created to save the giant panda and other endangered animals. Institutes supported by the foundation have made great strides in scientific research and wildlife conservation. The Chengdu Giant Panda Breeding Research Base currently has the largest captive panda population and has received worldwide recognition.

All funds received are used for:

- ★ - Funding of projects related to captive breeding, population restoration and scientific research of giant pandas and other endangered animals.
- ★ - Funding the creation and publication of documents, academic exchange, research cooperation, training and public education, as well as other projects, relevant to the objectives of the foundation.
- ★ - Fund public education, research, exchange and other educational projects related to the conservation of giant panda and other little-known endangered animals.
- ★ - Funding projects to reintroduce pandas into the wild¹⁵.

All donations can be verified at:

<http://www.pandahome.org/en/OurDonators/DonationList/2014-02-17/2153.html>

They will be listed under the name Nexxyo Labs.

¹⁵ <http://www.pandahome.org/en/AboutUs/BInformation/2014-02-21/2219.html>

33 Token Sale

In private pre-sales, 2,500,000 tokens are distributed at a price of 0.20 euros per unit. The IEO will be held at CHAINX. During the IEO 6,166,666 tokens will be distributed. All tokens for sale are pre-minified. All tokens not sold at the IEO will be burned after the completion of the IEO.

Pre-sale:

- **Pre-sale begins November 6, 2020.**
- **Pre-sale ends when the IEO begins (December 25).**
- **Pre-sale price: 0.20 euros per bamboo token (BAMBOO).**
- **Minimum purchase amount during pre-sale: 2000 euros.**
- **Maximum amount of purchase during pre-sale: 25000 euros.**
- **Only 2,500,000 Bamboo tokens are on sale in the pre-sale.**
- **All bamboo not sold during pre-sale will be burned¹⁶.**

IEO:

Periodo de ventas: 2020-12-25 14:00(KST) ~ 2021-01-30 13:00(KST)		
1a RONDA :	2020-12-25 ~ 2021-01-05	1BAMBOO=0.0009 ETH
2ª vuelta:	2021-01-06 ~ 2021-01-16	1BAMBOO=0.0012 ETH
3ª RONDA :	2021-01-17 ~ 2021-01-30	1BAMBOO=0.0015 ETH

¹⁶ <https://BambooDefi.medium.com/BambooDefi-pre-sale-info-c399c3e4cd7a>

Hardcap :	
1ª RONDA :	1,666,666 BAMBOO TOKENS
2ª RONDA:	2,000,000 BAMBOO TOKENS
3ª RONDA :	2,500,000 BAMBOO TOKENS ¹⁷

34 Why choose BambooDefi

- ★ ✨ 1. - BambooDefi is a DeFi Exchange that allows traders to exchange cryptom currencies at the most favorable and attractive price thanks to our liquidity providers and a liquidity fund distribution and support system.
- ★ ✨ 2. BambooDefi is a great opportunity to generate passive income for our users thanks to our staking system. It is also a great profit opportunity for liquidity providers. We use several incentive programs for our users to support the BambooDefi ecosystem community.
- ★ ✨ 3. Our main objective is to ensure the stable development and growth of the BambooDefi ecosystem. For this purpose, we have created the BAMBOO token support program and the BAMBOO emission control system, implemented using several tools such as Raindrop, Bamboo Vault, BAMBOO emission control in the first 2 years, and other measures.
- ★ ✨ 4. BambooDefi products are available to users all over the world, regardless of their social and economic differences, their level of wealth and their education. This makes BambooDefi a truly popular and democratic project.
- ★ ✨ 5. BambooDefi will promote the BAMBOO brand worldwide. By developing our brand and offering our products to a wide range of people, we help support Panda.

¹⁷ <https://chainx.kr/chainvest-detail/2377>

- ★ ✨ 6. BambooDefi was created by the Nexxyo Labs team with technical support from Kindynos, which already has experience in implementing successful cryptography projects with its own working ecosystem. The experience acquired in Nexxyo Labs is also applied in BambooDefi.
- ★ ✨ 7. To make the work with BambooDefi even more convenient and comfortable for our users, we decided to combine crypto currencies with fiat using the Bamboo Card. The Bamboo Card will be used not only for cashless payments in stores worldwide, but also at the ATMs of our company Aurora Crypto Machines, created by Nexxyo Labs, whose ATMs are distributed worldwide.
- ★ ✨ 8. The security of BambooDefi and all its products is of utmost importance to us. Therefore, before putting the product into operation and offering it to users, we pass an audit at Red4Sec.
- ★ ✨ 9. Nexxyo Labs' experience and connections in the cryptotechnology industry will allow us to list BAMBOO in the main exchanges, which will contribute to the growth of the BambooDefi ecosystem and increase the exposure of Bamboo to the general public.
- ★ ✨ 10. BambooDefi will never stop, but will constantly develop and improve the quality of the products included in the ecosystem to make the work of the platform easier and more comfortable and to develop our ecosystem further. Perseverance in achieving our results is our most important feature.

35 The BambooDefi team

The developer of BambooDefi is Nexxyo Labs. It is a technology company that consists of a multidisciplinary team that develops the latest technological applications to facilitate the daily life of individuals and businesses.

In BambooDefi, our goal is to create a user-friendly tool that takes full advantage of the DeFI ecosystem, without neglecting the importance of well-applied technology and platform reliability. Our logo is a Panda. The Panda looks friendly, but behind this nice and funny face hides a big, strong and powerful bear.

The team is made up of professionals from many fields with a great deal of knowledge and accumulated experience.

Along with this experience and enthusiasm for new technologies, Nexxyo Labs is fully dedicated to the development of BambooDefi.

In NexxyoLabs we are a family, we are all different, but we are united by the passion for knowledge and a job well done.

Teamwork is one of our core values and an important part of our team culture. In the last year, the Nexxyo Labs team has grown.

We are open to cooperation in search of new technologies, new opportunities and perspectives.

37 Appendix 1. Supported tokens

At the time of launching the platform, BambooDefi supports the following tokens. In the future, new tokens and new pairs will be added with community approval. We welcome any suggestions from the community through our social networks and our integrated voting system.

- 1 Bamboo(BAMBOO)
- 2 Tether (USDT)
- 3 TrueUSD(TUSD)
- 4 USD Coin (USDC)
- 5 HUSD(HUSD)
- 6 Dai (DAI)
- 7 Probit Token (PROB)
- 8 Okex Token (OKB)
- 9 Synthetix Network Token (SNX)
- 10 Chainlink (LINK)
- 11 EterBase (XBASE)
- 12 Compound (COMP)
- 13 Crypto.com Coin (CRO)
- 14 Yearn Finance (YFI)
- 15 Uniswap (UNI)
- 16 Kucoin Shares (KCS)
- 17 Harvest Finance (FARM)
- 18 ETHLEND (LEND)
- 19 UMA (UMA)
- 20 OKB(OKB)
- 21 MAKER(MKR)
- 22 BITFINEX LEO TOKEN (LEO)
- 23 SUSHI (SUSHI)
- 24 HUOBITOKEN (HT)
- 25 FTX Token (FTT)
- 26 Wrapped Bitcoin (WBTC)
- 27 Wrapped ZCASH (WZEC)

38 Appendix 2. Geographical restrictions

Please note that the information contained in this Whitepaper is not directed to, nor presented for viewing by, or distributed to, any person resident or physically present in the U.S. (except as provided in Rule 144A under the Securities Act regarding "qualified institutional investors" (QIBs)) or China.

Access to the information contained in this Whitepaper is denied to any person to whom these restrictions apply, i.e., Restricted Individuals. Each investor has an obligation to inform itself properly and to comply with any applicable restrictions. Bamboo DeFi does not assume any responsibility in case of any infringement in this sense and reserves the right to take the necessary measures, including the cancellation of the sale of the tokens.

Bamboo DeFi has not and does not intend to register any of its financial assets (or guarantee them, if any), in accordance with the U.S. Financial Assets Act of 1933 or any applicable U.S. State Financial Assets Act, nor will it make any public offer for sale of financial assets in the U.S. or any other country. Bamboo DeFi complies with the financial asset registration exemption regulations under the Financial Assets Act of 1933, which requires that financial assets be offered for sale only to "qualified institutional investors" as defined in Rule 144A.

The following geographic restrictions will apply to the launch of the Presale:

- 1 Afghanistan
- 2 Bangladesh
- 3 Bolivia
- 4 Burma (Myanmar)
- 5 Burundi
- 6 Central African Republic
- 7 Crimea Region
- 8 Cuba
- 9 Congo Rep. Dem.
- 10 Ecuador
- 11 Eritrea
- 12 Republic of Guinea
- 13 Guinea-Bissau
- 14 Lebanon
- 15 Libya
- 16 Hong Kong SAR
- 17 Mainland China
- 18 Mali
- 19 Iran
- 20 Iraq
- 21 Namibia
- 22 Nepal
- 23 North Korea
- 24 Kyrgyzstan
- 25 Singapore
- 26 Somalia
- 27 Sudan
- 28 South Sudan
- 29 Syria
- 30 United States
- 31 Venezuela
- 32 Yemen
- 33 Zimbabwe

39 Annex 3 Prevention of money laundering and financing of terrorism

Nexxyo Labs is committed to comply with the provisions of Law 10/2010, of April 28, on the prevention of money laundering and terrorist financing ("Law 10/2010"), which transposes into Spanish law Directive 2005/60 / EC of the Parliament and Council, of October 26, on the prevention of the use of the financial system for the purpose of money laundering and terrorist financing (known as the Third Directive), as well as the provisions of Royal Decree 304/2014 of May 5. , by which the Regulation of Law 10/2010 is approved, as well as with any other rule and/or regulation implemented or created in accordance with such rules, or that implement, develop, modify, substitute, recreate or consolidate, as well as any other Laws applicable to the prevention of money laundering and financing of terrorism that may exist in any applicable jurisdiction, to the extent that such rules are applicable.

40 Annex 4 Protection of personal data

Both in relation to personal data processing activities involving the IEO and in relation to processing within the framework of its operations, BambooDeFi will comply with the General Data Protection Regulation (EU) 2016/679 of 27 April 2016 (hereinafter the "RGPD") as well as any other standard and/or regulation implemented or created in accordance with such standard, or that implements, develops, modifies, replaces, recreates or consolidates it, as well as any other laws applicable to the processing of personal data. data that may exist in any applicable jurisdiction, including, where appropriate, the guides and codes of practice published by the supervisory authorities.

Among other applicable obligations, Nexxyo Labs will comply with the pre-determined privacy principles and privacy by design.

Nexxyo Labs has established procedures to ensure compliance with the right to information in data collection by using the appropriate information clause at the time it collects personal data from its investors or users.

In addition, it is committed to sign with all those third parties that access personal data under its responsibility the corresponding contract of treatment order.

41 Annex 5 Submission to arbitration

The intervening parties freely and voluntarily agree that any litigation, discrepancy, question, claim resulting from the execution or interpretation of this technical document and how to deal with it or related to it, directly or indirectly, will be definitively resolved through the Arbitration administered by the Blockchain Arbitration Society (BAS), which is entrusted with the administration of the arbitration and the appointment of the arbitrator or arbitrators, in accordance with its Rules and Regulations. The language of the arbitration will be Spanish or English.
