1. Introduction

Blockchain is a distributed data system involving multiple nodes. The most significant feature is that there is no central node. Therefore, modifications and falsifications are not possible. Because there are so many nodes involved, it is one massive ledger with its own trust mechanism. Because the data is open, any node in the blockchain can participate in adding to the ledger. When a change occurs in the data, the system selects the node with the fastest speed and records that data. At the same time, it instructs the other nodes to back up the data. This way, every node in the system can have a complete ledger. This is why blockchain technology is attracting the attention of industries as it ensures data consistency, fairness and transparency.

Over the past two decades, the development of Internet-based technologies has involved millions of individual investors in global financial market transactions. Due to the tremendous demand for financial transactions and large profits trading, Internet financial trading companies have grown rapidly. However, traditional regulation and regulation of foreign exchange transactions in each country make it difficult for traders to deposit and withdraw money for trading. CENTERCOIN will ensure that the exchange of local currencies and dollars in each country is safe and free.

To this end, CENTERCOIN seeks to provide a link encrypted currency trading.

CENTERCOIN is pursuing the following:

- (1) Provision of safe and easy deposit and withdrawal platform for cryptocurrency market
- (2) Provision of an abundance of trading signals
- (3) Provision of AI program for automatic trading
- (4) Provision of cryptocurrency investment portfolio through linkage with trading platforms

2. Vision

With the explosive development of cryptocurrency whose representative coin has been bitcoin for some time, the cryptocurrency market, which consists of Bitcoin, Ether, and various derivative digital assets, which are the background technology of blockchain, now sees trading of over 2,000 different cryptocurrencies and the traded amount exceeds USD 1 trillion. But it doesn't stop there. The cryptocurrency market is still growing exponentially, and the potential is unlimited. Blockchain technology is expected to make an important contribution to the establishment of a modernized economic system by accelerating technological innovation, organizational reform and efficiency innovation throughout the economic system through the establishment of a "value network".

The total foreign currency market day trading volume is USD 3.2 trillion, and the deposit and withdrawal volume is USD 50 billion annually. We will help each broker and trader deposit and withdraw money via CENTERCOIN listed on the exchange, and will maximize the benefit of initial coin participants through our own broker and exchange projects.

3. CENTERCOIN

We will provide special, efficient and secure cryptocurrency trading services through CENTERCOIN, our cryptocurrency exchange, and our online trading platform. The platform will stick to an easy interface, efficient and intuitive trading methods, and will be a platform specialized for providing customer support services. With decentralized ledger transaction, all transaction details will be transparent and CENTERCOIN's own transfer and payment will be concise but thorough. Traders holding CENTERCOIN can benefit from CFD, stocks, futures, commodities and index commodities using the online trading platform. This is an area that has not yet been serviced.

In order to ensure the success of the project, the Foundation has a team of professionals with expertise and vast experience in banking, operations and technology, from blockchain to online trading.

In order to ensure the success of the project, the Foundation has a team of professionals with expertise and vast experience in banking, operations and technology, from blockchain to online trading.

4. Business Structure

4.1 Gaming Market Item Trading

All transactions for all products that used CENTERCOIN as a means of payment are recorded, and the coin is paid in return for verification of these records. Game users participate in blockchain verification simply by running games and acquire compensation accordingly.

The simple verification function is added to the game system, but the result is immense. Game users can use the acquired CENTERCOIN as a payment method to use all products and services in the game. Not only that, but they can also use it as a payment method for all product and service sellers participating in a time-play environment.

Since CENTERCOIN is awarded to game users for the time that they input, it provides a more powerful motive to use than compensation systems such as credit card points and airline mileage, which are incidentally acquired as a form of reward for the use of fiat currency in IT services and various service environments. In particular, users can overcome the limitation of having to increase the amount paid in order to accumulate rewards, like the mileage system.

Game users acquire CENTERCOIN through the following steps:

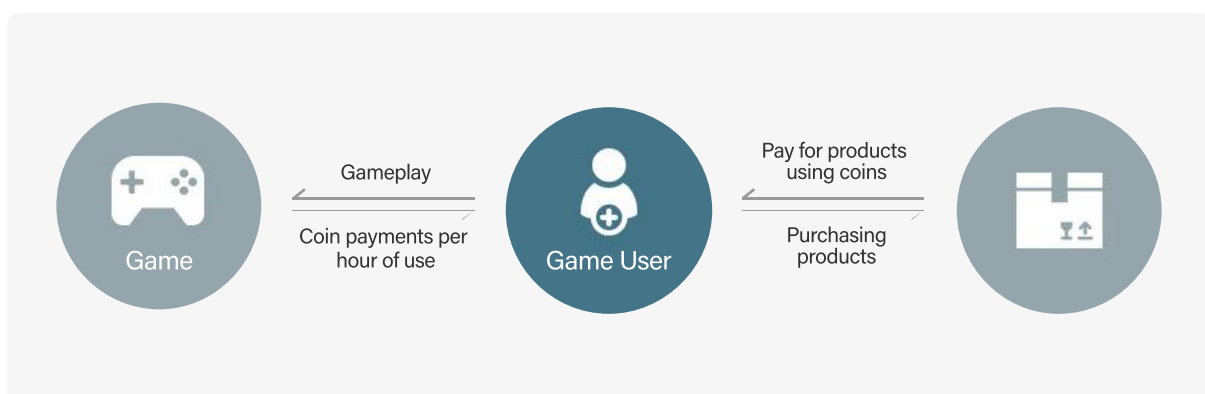

- 1) Game access: Confirmation of game user information, acquisition of electronic wallet address, start of usage time measurement / verification
- 2) Game usage period: time measurement and verification (mining), confirming real-time usage information
- 3) Ending of game use: Acquisition and distribution of coins, game user information and transfer of coins to electronic wallet address

Games using the module can acquire or use the following game user information through each device or multiple devices, and can keep and use it by obtaining the consent of each user.

- 1) Game usage time
- 2) Accumulated coin amount

In particular, information on game usage time is the most important part of game usage information. For game time, game developers and game service providers can be most useful in capturing and analyzing retention data and customer loyalty data for games.

We have signed a contract to award coins to game users in cooperation with N-Future Entertainment Co., Ltd. Paid coins can be sold on the exchange. A typical game is "Grand Fisher".

4.2 Tangible Products Exchange Function

CENTERCOIN will be able to be used to purchase products through partnerships with offline companies.

Coins can be used at duty-free shops by through contracts with PNB MALL, Korea's duty-free shop.

We are currently in discussions with other museums, travel agencies, hospitals, hotels, etc.

<Coin linkage with participating companies in hardcore network>

P&B Mall is mainly frequented by Korean and international tourists. There are a variety of shopping and cultural spaces such as Piccadilly Gallery, the Picasso Exclusive Gallery, and VVIP Luxury Gallery, as well as P&B Mall, coffee shops, nail salons, etc. We plan to use CENTERCOIN through mobile wallets so that 10% of the purchase price of all products in the store can be used for bonus exchange products.

5. Project Description

5.1 Cryptocurrency Market Project

In recent years, the volume, capitalization, and project transaction volume of the cryptocurrency market have increased by more than 150 percent annually over the past several years. Costs can be saved by issuing crypto tokens that represent the underlying asset. In addition to transactions in the cryptocurrency market are also usable for bidirectional margin trading, which will lead to more transaction volume, which will lead to increased transactions and value of CENTERCOIN.

In the future, we are going to acquire a Gibraltar Regulated Exchange DLT license in Europe and a PI license under FCA.

The cryptocurrency exchange will impose transactions, withdrawals and listing fees, with a trading fee of 0.2%. The cryptocurrency exchange may charge a nominal fee for withdrawals. The cryptocurrency exchange is planning development as a coin listing collective for ICO companies. To this end, the cryptocurrency exchange plans to inspect the listed companies for sufficient qualifications and perform due diligence, and plans to charge service setup fees and annual dues CENTERCOIN for listing their coins. Traders can deposit funds as cryptocurrency into their online trading account through the cryptocurrency exchange's cryptocurrency account, and receive a discount on commissions when trading. Investors who deposit funds in CENTERCOIN will enjoy more discounts. The discount will be in the form of a CENTERCOIN rebate.

6. Business Profits

We will promote the use of CENTERCOIN in each project so that issued coins can be burned, thereby maintaining and raising the value of the coin.

7. Advantages of Purchasing CENTERCOIN

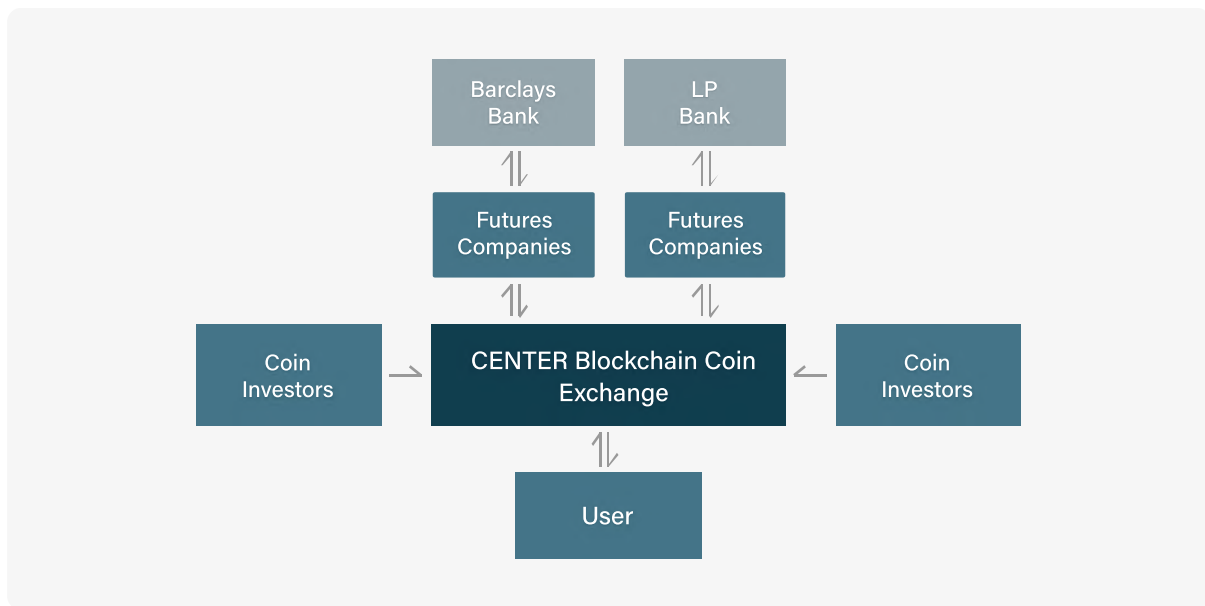

If a trader does not have any coin, he must buy it from the exchange. Coin prices fluctuate because there is always a purchase order on the exchange. The coins used are burned and the total number of coins is continuously reduced. CENTERCOIN can be used to pay for transparent brokerage service costs and it can be resold to CENTERCOIN clients via the exchange.

8. Use of CENTERCOIN

The coin's cryptocurrency market abbreviation is "CENT". It is shown as a completed number written to as much as 18 digits below the decimal point. The total number of CENTERCOIN to be issued is 5 billion. After the ICO has been completed, it will be possible to buy and sell CENTERCOIN using the legal currencies BTC, ETH, XRP and LTH through the cryptocurrency exchanges of several cooperating partners recognized by the industry.

CENTERCOIN holders can receive a variety of benefits. Depending on the amount of coins held, additional services and incentives will be provided, such as personal account management, market updates, and marketing bonuses. In addition, traders who open trading accounts and deposit funds in CENTERCOIN can also receive spread discounts.

Depending on the amount of coins held, additional services and incentives will be provided, such as personal account management, market updates, and marketing bonuses. In addition, traders who open trading accounts and deposit funds in CENTERCOIN can also receive spread discounts.

9. Technical Description

CENTERCOIN will provide a complete digital cash / chip / symbolic currency management solution. Core Data Field Blocking: To ensure the fairness of the data, we have put the business transaction data in blockchain so that the data cannot be modified based on the characteristics of the blockchain. At the same time, we have opened a blockchain browser to enable clients to view transaction details easily.

Combination of Centralized Structure and Blockchain: The platform combines the centralization structure and blockchain, ensuring openness and transparency of the data under the premise of assuring business performance by fully exploiting the technical merits of both centralization and blockchain.

Scalability & High Availability: When designing the platform structure, we will use scalability and high-availability technology to quickly scale without refactoring as workloads and client numbers grow. We will expand the platform ecosystem by listing thousands of developers through opening the platform. A smart contract is like an automatic warranty account for users. If certain conditions are met, the program will automatically release the funds. On the surface, smart contracts are code that store, authenticate, and execute blockchain. Unlike traditional service codes, smart contracts are visible to

everyone. This is because all the code for smart contracts is in the blockchain. In addition, smart contracts are not limited to specific hardware. In fact, the code of smart contracts is executed by all participating hardware.

10. Coin Distribution

Total Coins: 5 billion

Mining: 1.5 billion

Pre-mining: 3.5 billion

Amount in circulation: 1.5 billion

11. Coin Usage

Coins for sale: 30%

Coins for teams, affiliates and consultants: 20%

Reserve: 10%

Marketing: 5%

Development: 5%

Coins for teams, affiliates and consultants will be kept in safe storage for one year.

Coins for reserves will be kept in safe storage for six months.

Development Costs

Unlike simple contract development, building a market prediction platform involves several processes. Platform development can be carried out according to plan as long as technological research and development, recruitment of talent, team building and sufficient development costs are supported.

Consulting Costs

Market forecasts can be broken down into several areas. Customers in different fields have different habits. We plan to conduct market surveys thoroughly using these costs to consult with experts and institutions in relevant fields.

Legal Costs

Market forecasting is a field that hampers innovation in many industries but is under the strict supervision and control of the law. For that reason, legal work that meets the supervisory management requirements (especially gambling or securities laws) must be backed by funds. At the same time, we must prepare reserves for any legal cases that may arise in the future. We plan to hire experts to receive consulting on sales of cryptocurrency.

Marketing Costs

Because the market forecast platform field is very competitive, sufficient publicity and brand building is very important. This includes traditional industries, ongoing promotion of the blockchain industry, financing for marketing, and rapid growth in the number of platform users.

Other Costs

Other operating expenses in addition to those outlined above

12. Disclaimer and Risk

12.1 Currency Supervision Management Risk

In each country, cryptocurrency is classified and supervised as trade, and governments are seeking public policy for management thereof. To restrain the use of cryptocurrency for local commercial activities, governments will enforce laws and regulations and crack down on such acts. In recent years, China and Korea have announced bans on cryptocurrency trading, but other countries have stipulated

that they will classify and manage cryptocurrency trading as a securities issue. If this happens, it may cause CENTERCOIN holders to be unable to use CENTERCOIN before CENTERCOIN is legalized.

12.2 CENTERCOIN Internet Usage-related Risks

Trading with cryptocurrencies is a very complex process and stringent eligibility requirements must be met. We cannot guarantee that developers will be able to successfully build a cryptocurrency payment service system around the world. In such case, liquidity of CENTERCOIN as a payment currency on the Internet will be reduced.

12.3 Cryptocurrency / Crowdfunding-related Risks

CENTERCOIN cryptocurrency is not an investment product. To be precise, CENTERCOIN only performs certain functions in the system. Without the CENTERCOIN cryptocurrency, the general public cannot access the CENTERCOIN system. For this reason, we assume that CENTERCOIN cryptocurrency is not a security that meets the requirements set forth in the Public Offering Guide. However, it is worth noting that public policy on virtual currency sales is changing, and that the supervising authority may broaden the scope of supervision in the future. Cryptocurrency sales may also be subject to restrictions based on registration requirements in the United States and other jurisdictions. If the sale of CENTERCOIN cryptocurrency is subject to restrictions based on registration requirements, the sale of CENTERCOIN may be affected or deferred indefinitely.

12.4 Tax Risks

CENTERCOIN cryptocurrency is a kind of payment currency, and may be subject to local income tax, capital gains tax, value added tax or other tax limits. This uncertainty of tax-related laws can cause businesses and customers to face the unpredictable taxation issue associated with capital gains while using CENTERCOIN as a payment currency or when trading CENTERCOIN.

12.5 Capital Deduction Risk

Many jurisdictions, such as China, are rigorously deducting the international flow of capital. CENTERCOIN holders may be subject to regulation by these laws at any time. As a result, CENTERCOIN cryptocurrency holders may be subject to penalties or legal sanctions from the government in the process of moving CENTERCOIN from a local jurisdiction to a foreign exchange.

12.6 CTF and Anti-Money Laundering Ordinance

The United States has already issued a series of laws that strike terrorist financing and money laundering practices. Other countries have also established similar laws to curb illegal flow of such funds. Some offenders may violate these laws using cryptocurrency. Any act of illegal use of CENTERCOIN cryptocurrency seriously undermines CENTERCOIN's reputation in the international community. If such should occur, the matter may be investigated by the CTF and anti-money laundering supervisory agencies, which may seriously affect coin distribution and flow in the CENTERCOIN ecological system.

12.7 Commercial Risks

We cannot guarantee that the company will succeed in the process of selecting, developing and distributing new products and services, or improving existing products and services. In the case of failure, the company's business, financial situation and operating results will be seriously affected. Whether the company can achieve its goals depends on how much talent the company can acquire. Competition among such talent is intense. In addition, we cannot guarantee that the performance of the company will not be affected by inability to attract or retain talent. The industry the company operates in is a new industry, and may be subject to rigorous supervision and scrutiny. We can not guarantee that the government will not monitor the company's operations or enforce legal actions against the company. With such government supervision, the company may be subject to judgment, fines, penalties, reorganization, or the provision of some goods or services may be ceased. Such matters may impair the company's reputation and require more operating costs, which may lead to a severe disruption in the development and production of CENTERCOIN cryptocurrency or projects.
