

Hoge

A DeFI Deflationary Cryptocurrency

Automatic 2% Distribution to Holders and Burn on Each Transaction.

are right now!

Abstract

If we have learned one thing from DOGE making its way into the top 10 cryptocurrencies by market cap, it's that there is plenty of room in the crypto space for a token whose value rests on internet subculture. After all, why shouldn't we have our own token that we can use and exchange amongst ourselves? DOGE is extraordinary in this aspect. However, as DOGE is inflationary by design, its tokenomics are questionable. As the number of Dogecoins in circulation increases, their individual value may diminish over time. This is where HOGE comes into play. There will never be more HOGE in circulation than there

HOGE is a deflationary cryptocurrency. Every time a transaction takes place with HOGE, 2% of that transaction is distributed and removed (i.e. "burned") from the total supply. This increases the scarcity of every HOGE coin in circulation. What this means is that every time HOGE is used, the value of the remaining HOGE tokens in circulation is increased by simultaneously decreasing the supply (deflation), while also distributing HOGE to everyone using the token. As a result of this, every single HOGE holder has an incentive to spread the use of HOGE as much as possible. As more transactions take place on the network, the individual net-worth of all who own a piece of the network increases as well.

Introduction

Many new meme tokens that start out with a small market cap are subjects to pump and dump schemes and unfortunately HOGE was no exception. However, when the dust settled, what was left was a creative and dedicated community of people from all walks of life spontaneously working together to achieve something. The truth is we enjoyed it so much that we decided to stay and dig in our heels to make this work. No matter how long it takes. The beauty of it is, because of the design behind the HOGE tokenomics (and our desire to meme until a potential bitter end), any pump and dump scheme will only make us stronger!

Why would I HODL HOGE?

Holding HOGE rewards you with some redistribution, our coin has a burn mechanic with a 2% distribution shared to all the wallets, including the burned wallet (mentioned above).

We have locked liquidity and don't have a big team wallet.

The endless creativity of our community and our desire to help each other to reach project milestones is our biggest strength - if in doubt - check our discord or telegram! Being part of the community is a great way to contribute or motivate yourself to pick up a new creative or technical skill! This video is just one example of our community's creativity! HOGE is a roller coaster of emotions: hope, fear, joy, despair, you name it! HOGE is not just a monetary investment - it's an experience!

We aren't trying to pump based only on hype without any logic, we want to grow and expand our outreach and the uses of the token. We believe memes, laughter and deflation already have value, but we often discuss further use-cases and consider suggestions from the community as well!

In a short period of time after the creation of the token, we managed to acquire listings on multiple legitimate exchanges. We arranged sponsorship events with big companies, developed NFTs, games, created our own merchandise and much much more!

And last, but not least - our badass mascot has unlimited meme (and therefore marketing, or in the worst case - coping) potential!

So after all this - why wouldn't you HODL HOGE?

Transactions and Tokenomics

The HOGE ERC-20 token has a 2% reflect amount each transaction. We can calculate the payout and burn from the following formulas. The total minted tokens of HOGE is 1,000,000,000,000 (1 trillion) with 500,000,000,000 (500 billion) burned on the initial mint.

$$DistributedAmount = TransactionAmount * 0.02$$

$$DistributedPerAddr = DistributedAmount * \frac{AddrOwnedHoge}{\sum TotalHoge}$$

$$BurnedAmount = DistributedAmount * \frac{BurnAddrOwnedHoge}{\sum TotalHoge}$$

We can show an example of how this looks like in practice. We will give the HOGE owner address 0x0HOGE a value of 1,000,000,000 Hoge and a new buyer the address of 0x0HOGENEWBUYER with a value of 0 HOGE. The address 0x0HOGENEWBUYER will buy 1,000,000,000 HOGE:

1. 0x0HOGENEWBUYER wants to buy 1,000,000,000 HOGE on Uniswap and swaps ETH for HOGE with 5% slippage to account for the 2% distribution.

$$\begin{aligned} DistributedAmount &= 1000000000 * 0.02 = 20000000 \text{ HOGE} \\ 0x0 \text{ HOGEDistribution} &= 20000000 * \frac{0x0 \text{ HOGE} = 1000000000}{1000000000000} \\ 0x0 \text{ HOGEDistribution} &= 20000 \text{ HOGE} \end{aligned}$$

$$0x0 \text{ HOG E} = 1000000000 + 200000 = 1000020000 \text{ HOG E}$$

$$0x0 \text{ BurnedAmount} = 20000000 * \frac{0 \text{ xBurnedHoge} = 563897469786}{1000000000000} = 11277949 \text{ HOG E}$$

$$\sum \text{TotalBurnedHoge} = 11277949 + 563897469786 = 563908747735 \text{ HOG E}$$

- 0x0HOGENEWBUYER distributed 8722051 HOG E to active wallets and burned 11277949 HOG E on the swap from ETH to HOG E, with a total cost of 1020000000 HOG E plus uniswap liquidity pool fees and ethereum gas fees.
- The holder of the address 0x0HOG E total went from 1000000000 HOG E to 1000020000 just by holding the token in their wallet, without worrying about the issues and cost of staking in a liquidity pool.

HOGE was created as the DeFI version of DOGE. Fully managed and supported by an active community with thousands of members, we are planning to bring to the world a way to invest into a fun cryptocurrency with simple mechanics that will reward every wallet for holding. 2% of each transaction will be burned and shared to every holder of our coin. In a few days we managed to be listed on major websites, but much more will come soon (micro transactions system, more promotions, Github, crowdfunding platform, etc).

Thanks to all the HOGLERS all around the world!

Dank Memes
